DENSE FOG

DENSE FOG ADVISORY - issued when widespread dense fog develops. When this happens, visibilities frequently drop to one-quarter of a mile or less. These conditions make travel difficult.

DENSE FOG

Small Decisions can have a **BIG IMPACT.**

- Slow down when visibility is reduced
- Don't use cruise control
- Delay travel until conditions improve

Don't let a bad decision be your last.

VALLEY FOG

1 Air cools at higher elevations as the ground radiates heat into the atmosphere and space.

2 Cooler air drains downslope into the valley.

3 A cool, stable layer forms near the ground, which limits turbulent mixing and traps the cool, moist air.

4 The air near the ground continues to cool until water vapor molecules are changed into small droplets of liquid water.
