Precipitation

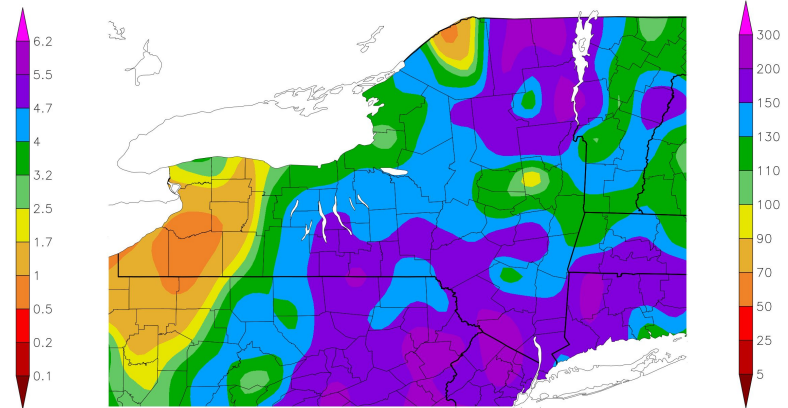

- Rainfall on Jan 9th and 10th helped drought conditions a bit across western Genesee and Wyoming Counties.
- However, 30 day totals have been near to slightly below normal in the driest locations, offering only limited drought relief

Precipitation (in)
12/12/2023 – 1/10/2024

Generated 1/11/2024 at HPRCC using provisional data.

Percent of Normal Precipitation (%)
12/12/2023 – 1/10/2024

NOAA Regional Climate Center Generated 1/11/2024 at HPRCC using provisional data.

Summary of Impacts

Links: See/submit [Condition Monitoring Observer Reports \(CMOR\)](#) and view the [Drought Impacts Reporter](#)

Hydrologic Impacts

- Below normal 7-day flows on the western Genesee River Tributaries and the Tonawanda Creek.
Below normal groundwater well levels across eastern Wyoming and western Livingston Counties.

Agricultural Impacts

- There are no known impacts at this time

Fire Hazard Impacts

- There are no known impacts at this time

Other Impacts

- Some private wells have dried up in the most severe drought areas

Mitigation Actions

- Please refer to your municipality and/or water provider for mitigation information.

Hydrologic Conditions and Impacts

- Below normal 7 day average streamflows observed by the USGS across the Genesee River tributaries west of the Genesee River

Seven Day Precipitation Forecast

- Rainfall from Jan 9th and 10th may provide some drought relief, which will be accounted for in next week's Drought Monitor
- Lake effect snow will set up Saturday evening east of Lake Erie, and persist into the middle of next week. This should help with precipitation deficits across some of the areas hit hardest by drought conditions
- Cold temperatures throughout next week, however, will prevent melting of this snow and the recharging of the water table through at least the next week.

Drought Outlook

The latest monthly and seasonal outlooks can be found on the [CPC homepage](#)

- The 6 to 10 day precipitation outlook slightly favors below normal precipitation Jan 16 - 20 for areas not impacted by the lake effect snow.
- Longer range outlooks do not show any strong indication of any improvement

U.S. Seasonal Drought Outlook Drought Tendency During the Valid Period

Valid for December 21, 2023 - March 31, 2024
