Precipitation

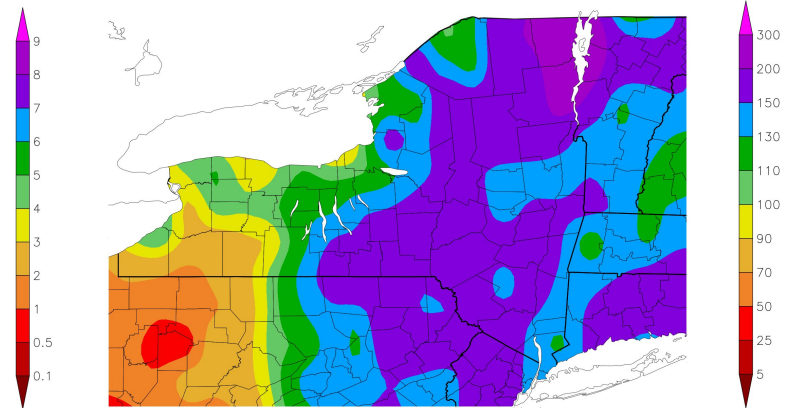

- Soaking rain on Dec 19th helped improve the 30 day precipitation deficits east of Rochester
- However, 30 day totals have been near normal at the previously driest locations, offering only limited drought relief

Precipitation (in)
11/28/2023 - 12/27/2023

Generated 12/28/2023 at HPRCC using provisional data.

Percent of Normal Precipitation (%)
11/28/2023 - 12/27/2023

NOAA Regional Climate Center Generated 12/28/2023 at HPRCC using provisional data.

Seven Day Precipitation Forecast

- Rainfall from yesterday and today may provide some drought relief, which will be accounted for in next week's Drought Monitor
- Moist weather pattern with frequent, but generally light rain or snow showers through this weekend. Overall only modest precipitation amounts totaling a quarter to half inch tonight through Sunday
- Mainly dry Monday through Wednesday with negligible precipitation amounts
- Chance for light precipitation amounts from rain or snow showers Thursday

Drought Outlook

The latest monthly and seasonal outlooks can be found on the [CPC homepage](#)

- The 8 to 14 day precipitation outlook favors above normal precipitation Jan 5 - 11. This combined with precipitation through this weekend may provide limited improvement
- Longer range outlooks do not show any strong indication of any improvement

U.S. Seasonal Drought Outlook Drought Tendency During the Valid Period

Valid for December 21, 2023 - March 31, 2024
