Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
----------	-----------	-------------------	---------------------	------------------------

CALIFORNIA, South Central

(CA-Z089) W CENTRAL S.J. VALLEY, (CA-Z090) E CENTRAL S.J. VALLEY, (CA-Z091) SW S.J. VALLEY, (CA-Z092) SE S.J. VALLEY, (CA-Z093) S SIERRA FOOTHILLS, (CA-Z094) TULARE CTY FOOTHILLS, (CA-Z095) KERN CTY MTNS, (CA-Z096) S SIERRA MTNS, (CA-Z097) TULARE CTY MTNS, (CA-Z098) INDIAN WELLS VLY, (CA-Z099) SE KERN CTY DESERT

12/01/16 00:00 PST	0	Drought
12/31/16 23:59 PST	0	

The California drought continues during the month of December, 2016. Fresno received 2.51" of precipitation and Bakersfield received 2.41" precipitation during the month. Fresno had slightly above normal precipitation with 0.74" above normal. Bakersfield had significantly above normal precipitation with 1.39" above the normal precipitation amounts. Above normal precipitation amounts did allow for slight improvement on drought conditions with an increase in soil moisture and some reservoir recharge.

The U.S. Drought Monitor continued to report exceptional drought conditions across the entire Central California region. This extent of exceptional drought is extremely unusual for California. The general trend of below normal precipitation and above normal temperatures has continued this year.

There continues to be significant media coverage on the on-going drought conditions. These reports include discussion of significant re-allocation of water resources from the east to west side of the San Joaquin Valley, farmers forgoing planting of some crops, loss or reduction of ground water, wells drying up in several communities leaving them with no water, and an unprecedented increase in fire danger across the Southern Sierra Nevada and Tehachapi Mountains. Also, communities in Central California interior face state mandated reductions in municipal water use.

(CA-Z090) E CENTRAL S.J. VALLEY, (CA-Z092) SE S.J. VALLEY

12/01/16 21:35 PST	0	Dense Fog
12/02/16 10:35 PST	0	

Clear skies and cooling temperatures in the wake of a low pressure system which was located over the Four Corners region allowed for radiational nighttime/morning dense fog to develop in parts of the San Joaquin Valley.

(CA-Z089) W CENTRAL S.J. VALLEY, (CA-Z090) E CENTRAL S.J. VALLEY, (CA-Z091) SW S.J. VALLEY, (CA-Z092) SE S.J. VALLEY

12/05/16 19:30 PST	0	Dense Fog
12/07/16 10:20 PST	0	

Clear skies, increased moisture from recent storm systems, and diurnal cooling associated with the presence of a retrograding upper level high pressure area over the central California region allowed for radiational nighttime/morning dense fog to develop in parts of the San Joaquin Valley.

(CA-Z096) S SIERRA MTNS, (CA-Z097) TULARE CTY MTNS

12/15/16 10:00 PST	0	Heavy Snow
12/16/16 16:00 PST	0	

A easterly moving low pressure system moved through central California bringing heavy snowfall to parts of the southern Sierra Nevada which was also enhanced at times by orographic lift.

(CA-Z095) KERN CTY MTNS

12/15/16 16:13 PST	0	High Wind (MAX 51 kt)
12/16/16 01:13 PST	0	

A eastward moving low pressure system made passage through central California bringing gusty southerly winds to the Kern County Mountain areas.

Spotter report of 24 hour rainfall total of 0.27 inches.

Slow southeasterly moving low pressure system coupled with northward moving tropical moisture brought heavy valley and foothill rains, heavy mountain snows, and gusty winds to parts of the central California interior. Precipitation was at times enhanced due to orographical lifting ahead of the slow southerly moving cold front associated with the low pressure system.
