12/01/22 00:00 PST	0	Drought
12/31/22 23:59 PST	0	

Despite the abundant rainfall and replenishing higher elevation snowpack received across the area in December, a long term precipitation deficit has resulted in continuing drought conditions across the central California Interior. Extreme drought conditions continued across most of the San Joaquin Valley and Kern County Deserts. Drought conditions did improve across the Sierra Nevada to moderate to severe conditions due to the abundant rainfall in December.

12/02/22 02:32 PST	0	High Wind (MAX 56 kt)
12/02/22 05:27 PST	0	

A large low pressure system dropped southeast out of the northeast Pacific into central California during the afternoon of December 1 which resulted in widespread precipitation across the area between the morning of December 1 until the morning of December 2. Much of the Sierra Nevada picked up between 1.5 and 3 inches of beneficial liquid precipitation while elevations above 6000 feet generally picked up between 1 to 2 feet of new snowfall. Much of the San Joaquin Valley picked up between a quarter and a half inch of rainfall with slightly higher amounts being picked up in Merced County while Kern County had noticeably less precipitation with most stations picking up between a tenth and two tenths of an inch of rainfall. In addition to the precipitation, several stations reported wind gusts exceeding 60 mph while a few low impact indicator sites in Kern County measured gusts exceeding 60 mph.

12/02/22 03:50 PST	0	Dense Fog
12/02/22 08:20 PST	0	

Skies cleared out across portions of the San Joaquin Valley during the morning of December 2. This resulted in some localized dense fog across the area with visibility as low as eighth of a mile being briefly reported in Merced and in Hanford. Visibility rapidly improved by late morning as the fog dissipated.

California Highway Patrol reported rocks in the roadway at the intersection of Ben Hur Road and Silver Bar Road.

An upper level trough which moved through the region on December 3 and 4 brought another round of widespread precipitation to the area. This system picked up some warm tropical moisture which resulted in snow levels being rather high for much of the duration of this event. While significant snowfall did fall above 8000 feet, moderate to locally heavy rainfall below the snow line as much of the Sierra Nevada picked up between 2 and 4 inches of rainfall while the adjacent foothills picked up between 1.5 and 3 inches of rain and the San Joaquin Valley picked up between half an inch and an inch of rainfall. A rockslide was reported near Mariposa which resulted in some

**(CA-Z302) MERCED-MADERA-MENDOTA, (CA-Z310) DELANO - WASCO - SHAFTER, (CA-Z334) TEHACHAPI**

12/07/22 02:15 PST	0	Dense Fog
12/07/22 10:53 PST	0	

A low pressure system moved eastward across central California during the afternoon and evening of December 6. As the low moved east of the area during the morning of December 7, skies cleared out and winds diminished across portions of the San Joaquin Valley and Tehachapi Mountains allowing for areas of dense fog to form as there was plenty of low level moisture around as a result of recent rainfall across the area. The fog lifted into a low cloud deck by late morning.

---

**(CA-Z302) MERCED-MADERA-MENDOTA, (CA-Z311) HANFORD - CORCORAN - LEMOORE**

12/08/22 02:50 PST	0	Dense Fog
12/08/22 08:15 PST	0	

A weak area of high pressure which built in over central California during the day on December 7 kept skies mainly clear and winds light overnight into the morning of December 8. This provided for favorable conditions for areas of dense fog to form towards daybreak in the San Joaquin Valley most noticeably in Merced County and near Hanford. The fog burned off by late morning.

## Storm Data and Unusual Weather Phenomena - December 2022

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
	12/10/22 21:24 PST		0	Flood (due to Heavy Rain)
	12/10/22 23:24 PST		0	Source: Law Enforcement

California Highway Patrol reported roadway flooding near the intersection of Lee and Bradbury Roads.

A strong low pressure system slowly moved across central California on December 10 and 11 providing the area with moderate to heavy precipitation. The precipitation fell as snow above 5000 feet with several SNOTEL stations picking up between 18 and 30 inches of estimated new snowfall. The snow level lowered to near 3000 feet by the afternoon of December 11 with some stations in the Sierra Nevada and higher foothills picking up between 3 and 6 inches of new snowfall. Many stations in the Sierra Nevada received between 3 and 5 inches of liquid precipitation while the adjacent foothills picked up between 1.5 and 3 inches of rainfall and much of the San Joaquin Valley and Tehachapi Mountains received between half an inch and an inch of rainfall. The precipitation did change over the snow in the Tehachapi Mountains above 4000 feet, but snowfall amounts were generally light. Rain shadowing effects limited precipitation across the Kern County Deserts with most stations receiving between a tenth of an inch and a quarter inch of rainfall. The precipitation tapered off during the evening of December 11 and ended by midday on December 12.

(CA-Z302) MERCED-MADERA-MENDOTA, (CA-Z303) PLANADA-LEGRAND-SNELLING, (CA-Z305) WEST SIDE OF FRESNO AND KINGS COUNTIES, (CA-Z306) CARUTHERS - SAN JOAQUIN - SELMA, (CA-Z309) BUTTONWILLOW- LOST HILLS - I5, (CA-Z310) DELANO - WASCO - SHAFTER, (CA-Z311) HANFORD - CORCORAN - LEMOORE, (CA-Z312) VISALIA - PORTERVILLE - REEDLEY				
	12/14/22 02:00 PST		0	Frost/Freeze
	12/17/22 08:00 PST		0	

A cold and dry airmass settled in over central California in the wake of a departed winter storm on December 12 and 13. With skies clearing out and winds diminishing, temperatures dropped below the freezing mark for a few hours across the rural areas of the San Joaquin Valley during the mornings of December 14, 15, 16 and 17.

(CA-Z302) MERCED-MADERA-MENDOTA, (CA-Z311) HANFORD - CORCORAN - LEMOORE				
	12/15/22 06:00 PST		0	Dense Fog
	12/15/22 11:05 PST		0	

Clear skies and light winds along with strong radiational cooling and a low level inversion made for favorable conditions for areas of dense fog to form by daybreak. Several webcams showed visibility below 1000 feet in Madera and Merced Counties where several school districts opened late for the first time this season due to dense fog. Patches of dense fog were also prevalent during the morning hours further south in Selma and Hanford. The fog completely dissipated by late morning.

(CA-Z302) MERCED-MADERA-MENDOTA, (CA-Z305) WEST SIDE OF FRESNO AND KINGS COUNTIES, (CA-Z310) DELANO - WASCO - SHAFTER, (CA-Z311) HANFORD - CORCORAN - LEMOORE, (CA-Z312) VISALIA - PORTERVILLE - REEDLEY				
	12/15/22 23:40 PST		0	Dense Fog
	12/16/22 11:40 PST		0	

Clear cleared out and light winds prevailed for the second consecutive night across the San Joaquin Valley. As a result, areas of dense fog formed overnight and persisted in some locations until late morning when it dissipated. Several webcams across the valley showed visibility below 1000 feet and several school districts had delayed openings or delayed or cancelled bus service due to fog.

(CA-Z302) MERCED-MADERA-MENDOTA, (CA-Z305) WEST SIDE OF FRESNO AND KINGS COUNTIES, (CA-Z306) CARUTHERS - SAN JOAQUIN - SELMA, (CA-Z307) FRESNO - CLOVIS, (CA-Z310) DELANO - WASCO - SHAFTER, (CA-Z311) HANFORD - CORCORAN - LEMOORE, (CA-Z312) VISALIA - PORTERVILLE - REEDLEY, (CA-Z314) BAKERSFIELD				
	12/16/22 20:45 PST		0	Dense Fog
	12/18/22 13:40 PST		0	

Clear skies and light winds prevailed across central California during the evening of December 16 which allowed for widespread dense fog to develop across the San Joaquin Valley during the morning of December 17. The fog lifted into a low cloud deck across most of the valley by late afternoon, but persisted in some locations until the morning of December 18. A stratus deck persisted across most of the valley until the afternoon of December 19 when mixing provided by a storm to the north of our area helped dissipate the low cloud deck.

(CA-Z306) CARUTHERS - SAN JOAQUIN - SELMA, (CA-Z307) FRESNO - CLOVIS, (CA-Z310) DELANO - WASCO - SHAFTER, (CA-Z311) HANFORD - CORCORAN - LEMOORE, (CA-Z312) VISALIA - PORTERVILLE - REEDLEY				
	12/20/22 05:15 PST		0	Dense Fog
	12/20/22 11:30 PST		0	

Skies cleared out across the central portion of the San Joaquin Valley following the passage of an upper level low pressure system which had moved through northern California. The clearing skies and light winds made conditions favorable for dense fog to form over the central portion of the San Joaquin Valley. The fog lifted into a low cloud deck by late morning.

(CA-Z302) MERCED-MADERA-MENDOTA, (CA-Z305) WEST SIDE OF FRESNO AND KINGS COUNTIES				
---	--	--	--	--

## Storm Data and Unusual Weather Phenomena - December 2022

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
	12/20/22 20:50 PST		0	Dense Fog
	12/21/22 08:56 PST		0	

A persistent low cloud deck inhibited fog formation across most of the San Joaquin Valley during the evening of December 20 through the morning of December 21. However, skies had cleared out during the afternoon of December 20 from Madera northward and over portions of the west side of the valley allowing for fog to form overnight. The fog lifted into a low cloud deck by late morning.

(CA-Z302) MERCED-MADERA-MENDOTA, (CA-Z305) WEST SIDE OF FRESNO AND KINGS COUNTIES, (CA-Z306) CARUTHERS - SAN JOAQUIN - SELMA, (CA-Z307) FRESNO - CLOVIS, (CA-Z310) DELANO - WASCO - SHAFTER, (CA-Z311) HANFORD - CORCORAN - LEMOORE, (CA-Z312) VISALIA - PORTERVILLE - REEDLEY, (CA-Z314) BAKERSFIELD				
	12/23/22 00:55 PST		0	Dense Fog
	12/23/22 11:35 PST		0	

High pressure strengthened over California during the morning of December 23. While a mild airmass prevailed over the higher elevations, inversion conditions over the San Joaquin Valley along with clear skies and light winds made conditions favorable for widespread dense fog to form during the early morning of December 23. The fog persisted until late morning when it lifted into a low cloud deck.

(CA-Z302) MERCED-MADERA-MENDOTA, (CA-Z305) WEST SIDE OF FRESNO AND KINGS COUNTIES, (CA-Z306) CARUTHERS - SAN JOAQUIN - SELMA, (CA-Z307) FRESNO - CLOVIS, (CA-Z310) DELANO - WASCO - SHAFTER, (CA-Z311) HANFORD - CORCORAN - LEMOORE, (CA-Z312) VISALIA - PORTERVILLE - REEDLEY, (CA-Z314) BAKERSFIELD				
	12/23/22 17:35 PST		0	Dense Fog
	12/24/22 12:53 PST		0	

Skies cleared out across much of the San Joaquin Valley during the late afternoon of December 23 which allowed for widespread dense fog to form during the evening as light winds and inversion conditions prevailed under high pressure. The fog persisted across much of the valley until the early afternoon of December 24 when it lifted into a low cloud deck.

(CA-Z302) MERCED-MADERA-MENDOTA, (CA-Z306) CARUTHERS - SAN JOAQUIN - SELMA, (CA-Z307) FRESNO - CLOVIS, (CA-Z310) DELANO - WASCO - SHAFTER, (CA-Z311) HANFORD - CORCORAN - LEMOORE, (CA-Z312) VISALIA - PORTERVILLE - REEDLEY, (CA-Z314) BAKERSFIELD				
	12/24/22 17:25 PST		0	Dense Fog
	12/25/22 13:53 PST		0	

Although the fog layer lifted into a stratus deck during the afternoon of December 24 across much of the San Joaquin Valley, it lowered back down to the valley floor in Merced County during the evening and further south overnight. This resulted in widespread dense fog prevailing across the San Joaquin Valley during Christmas morning. The fog lifted into a low cloud deck across most of the valley by early afternoon.

(CA-Z302) MERCED-MADERA-MENDOTA, (CA-Z306) CARUTHERS - SAN JOAQUIN - SELMA, (CA-Z307) FRESNO - CLOVIS, (CA-Z310) DELANO - WASCO - SHAFTER, (CA-Z311) HANFORD - CORCORAN - LEMOORE, (CA-Z312) VISALIA - PORTERVILLE - REEDLEY, (CA-Z314) BAKERSFIELD				
	12/25/22 15:50 PST		0	Dense Fog
	12/26/22 11:05 PST		0	

A low cloud deck remained over the San Joaquin Valley during the afternoon and evening of Christmas Day. The low cloud deck lowered back down to the valley floor overnight and widespread dense fog prevailed for the fourth consecutive morning over the San Joaquin Valley on December 26. By late morning the fog lifted into a stratus deck which finally dissipated by late afternoon as an incoming storm provided for some mixing to take place over the area.

	12/27/22 18:56 PST		0	Flood (due to Heavy Rain)
	12/27/22 20:56 PST		0	Source: Law Enforcement

California Highway Patrol reported flooding near the intersection of SR 43 and Merced Ave. near Shafter.

A strong upper low pressure system moved through California on December 27. This system had abundant moisture associated with it as it pulled up a deep fetch of moisture of tropical origin. This system brought widespread moderate to heavy precipitation to the area between the early morning until the early evening of December 27. The heavy rainfall produced a rockslide in Yosemite National Park which resulted in two fatalities. The precipitation tapered off by the early morning of December 28. Much of the higher Sierra Nevada picked up between an inch and a half and three inches of liquid precipitation with the precipitation mainly falling as snow above 7500 feet where many stations picked up between 18 and 30 inches of new snowfall. The snow level briefly lowered to around 6000 feet during the evening of December 27 and some light snowfall was observed between 6000 and 7500 feet. The Sierra foothills generally received between 1 to 2 inches of rain while 0.75 to 1.5 inches of rain fell in the San Joaquin Valley and the Tehachapi Mountains. Several reports of nuisance flooding were reported by law enforcement and on social media. Rain shadowing effects limited precipitation in the Kern County Deserts to a quarter inch or less. This system also brought some strong wind gusts to the mountains as several stations measured gusts exceeding 40 mph and a few low impact stations had brief gusts above 60 mph.

**(CA-Z302) MERCED-MADERA-MENDOTA, (CA-Z307) FRESNO - CLOVIS**

	12/27/22 20:10 PST		0	Dense Fog
	12/28/22 08:35 PST		0	

As the strong low pressure system which brought widespread moderate to heavy precipitation to the area on December 27 moved east of the area, skies cleared out and winds diminished. This allowed for some locally dense fog to form in the San Joaquin Valley from Fresno northward which impacted the morning commute. The fog completely dissipated by late morning.

## Storm Data and Unusual Weather Phenomena - December 2022

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
MARIPOSA COUNTY --- 1.0 S MIDPINES [37.54, -119.92], 0.9 S MIDPINES [37.54, -119.92], 0.9 S MIDPINES [37.54, -119.92], 1.0 S MIDPINES [37.54, -119.92]	12/31/22 23:16 PST		0	Debris Flow
	12/31/22 23:59 PST		0	Source: Law Enforcement

California Highway Patrol reported a large mudslide blocking the westbound lanes on SR 140 in Midpines.

A large upper trough moved slowly through California on December 30 and 31. This system had a deep fetch of tropical moisture associated with it which resulted in a period of moderate to heavy precipitation along with widespread flooding across much of the area on December 31. Numerous reports of flooding and debris flows were reported by law enforcement with several roads being briefly closed as a result of flooding. The system also produced strong wind gusts across the area between the afternoon of December 30 and the morning of January 1 with several stations in the West Side Hills and Tehachapi Mountains reporting gusts exceeding 60 mph. Several stations in the Sierra Nevada below 7500 feet picked up between 4 and 7 inches of rainfall while the adjacent foothills picked up 2 to 4 inches of rainfall. Rain shadowing effects limited precipitation in the San Joaquin Valley to between half an inch and an inch of rain at most locations while many stations in the Tehachapi Mountains also picked up between half an inch and an inch of rain. Several higher elevations SNOTEL stations picked up 18 to 30 inches of new snowfall adding to the heavy snowpack which had already accumulated earlier in December.
