Central California remained abnormally dry in July 2022. Scattered showers and thunderstorms did impact the area between the 26th and the 31st. Otherwise dry weather prevailed across the area. By the end of the month, nearly all of our area remained in an extreme or exceptional drought as most of our area has received less than a third of normal precipitation since July 1, 2020.

A large area of high pressure centered near the four corners area built westward into California and strengthened over the area providing for a period of dangerous heat over the San Joaquin Valley, lower Sierra foothills and the Kern River Valley during the afternoon hours. Daytime highs generally ranged between 103 and 108 degrees each day except on July 17 when daytime generally ranged between 107 and 112 degrees. The high weakened on July 21 and 22, but maximum temperatures remained in the triple digits at most locations.

KERN COUNTY --- 9.3 WNW INYOKERN AIRPORT [35.71, -117.99]				
	07/31/22 15:32 PST		0	Heavy Rain
	07/31/22 18:32 PST		0	Source: RAWS

The Blue Max RAWS measured 1.13 inches of rainfall from a heavy thunderstorm over a two and a half hour period.

An upper level high pressure center over the Great Basin provided for an easterly flow aloft over central California which allowed form enough mid/upper moisture to stream into the area for showers and thunderstorms to break out during the afternoon and evening. While several stations across the central California interior picked up between a hundredth of an inch and two tenths of an inch of rainfall, a few mountain locations that were impacted by heavier thunderstorms picked up more.
