	01/01/23 10:40 PST	0		Flood (due to Heavy Rain)
	01/01/23 13:40 PST	0		Source: Law Enforcement
California Highway Patrol reported water from a canal flooding onto the roadway south of Merced.				
<p>A large upper trough moved slowly through California on December 30 and 31. This system had a deep fetch of tropical moisture associated with it which resulted in a period of moderate to heavy precipitation along with widespread flooding across much of the area on December 31. Numerous reports of flooding and debris flows were reported by law enforcement with several roads being briefly closed as a result of flooding. The system also produced strong wind gusts across the area between the afternoon of December 30 and the morning of January 1 with several stations in the West Side Hills and Tehachapi Mountains reporting gusts exceeding 60 mph. Several stations in the Sierra Nevada below 7500 feet picked up between 4 and 7 inches of rainfall while the adjacent foothills picked up 2 to 4 inches of rainfall. Rain shadowing effects limited precipitation in the San Joaquin Valley to between half an inch and an inch of rain at most locations while many stations in the Tehachapi Mountains also picked up between half an inch and an inch of rain. Several higher elevations SNOTEL stations picked up 18 to 30 inches of new snowfall adding to the heavy snowpack which had already accumulated earlier in December.</p>				
<b>(CA-Z314) BAKERSFIELD</b>				
	01/03/23 06:55 PST	0		Dense Fog
	01/03/23 09:15 PST	0		

Following the passage on the large storm which moved through the area between December 30 and January 1, skies cleared out and winds diminished across the area on January 2. Patchy fog formed toward daybreak on January 3. The fog was most pronounced near Bakersfield where several webcams showed reduced visibility along SR 99 and SR 59 for a few hours in the morning. The fog dissipated by late morning.

Public report of a rockslide blocking northbound lanes of SR 49 a quarter mile south of Bagby.				

A large low pressure system brought moderate to heavy precipitation, widespread flooding and strong winds to the area on January 4 and 5. This system had an atmospheric river associated with it which contained a deep fetch of moisture of tropical origin resulting in widespread moderate to heavy precipitation across the area with the snow level ranging between 7000 and 8000 feet for much of the event. Several stations above 8000 feet picked up 18 to 30 inches of new snowfall from this storm. Many stations in the Sierra Nevada picked up an inch and a half to three inches of liquid precipitation while the adjacent foothills picked up 1 to 2 inches of rain and the San Joaquin Valley received around a half inch to an inch from Fresno County northward and a quarter to a half inch further southward. This rainfall came on top of already saturated soils from the late December storms resulting in widespread nuisance flooding across the area. The Tehachapi Mountains generally picked up between a quarter to a half inch of rainfall while rain shadowing effect limited rainfall in the Kern County Deserts to a tenth of an inch or less at most stations. This system also produced very strong winds across much of the area with several stations in the Kern County Mountains and West Side hills measuring gusts in excess of 60 mph with several ridge top stations in Kern County reporting peak gusts in excess of 75 mph. Several reports of wind damage were received by WFO Hanford during this event.

## Storm Data and Unusual Weather Phenomena - January 2023

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
	01/05/23 23:45 PST		0	Dense Fog
	01/06/23 09:15 PST		0	

Skies cleared out across the San Joaquin Valley during the early morning of January 6 behind the strong winter storm which brought moderate to heavy rainfall to much of the area on January 4 and 5. In addition, diminishing winds made conditions favorable for areas of dense fog to form. The fog was most noticeable around Hanford where visibility was reduced to below 1000 feet and webcams in the area showed reduced visibility for much of the night through late morning when the fog dissipated.

01/08/23 13:34 PST	0	

A low pressure system which moved through northern California brought another round of light to moderate precipitation along with strong winds gusts to the between the evening of January 7 and the early afternoon of January 8. While the strong winds were not as prevalent as they were during the January 4 and 5 storm, several stations did measure brief gusts exceeding 60 mph. Precipitation amounts were generally not as significant as they had been with the previous storm, but a half an inch to an inch of liquid precipitation was received Sierra Nevada near Yosemite Park with a quarter to a half inch further south between Yosemite Park and Kings Canyon. Amounts were generally a tenth of an inch or less south of Kings Canyon. The snow level was around 5000 feet for much of this event with several higher elevation stations in Yosemite Park picking up between 5 and 10 inches of new snowfall. Rainfall in the San Joaquin Valley was generally a quarter to a half an inch north of Fresno with a tenth to a quarter inch further south. Much of the south end of the valley in Kern County picked up a tenth of an inch or less.

## Storm Data and Unusual Weather Phenomena - January 2023

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
	01/09/23 12:00 PST		10M	Flood (due to Heavy Rain)
	01/11/23 12:00 PST		0	Source: Emergency Manager

The Merced County Emergency Manager reported that several mandatory evacuations took place in Merced County as a result of flooding. The impacted areas included Planada which was completely evacuated as well as portions of Merced. Rainfall amounts in the Merced area were between 2 and 3 inches between noon on January 9 and the early morning of January 10 resulting in several cars being stranded and abandoned in flood waters as SR 99 through Merced and 16th St. in Merced were inundated with flood waters. A Flood Warning was already in place for Bear Creek since January 8 and continued through January 11. Bear Creek overflowed and peaked at a new record crest of 26.2 feet during the morning of January 10. Due to the anticipated severity of this event, resources were deployed to the Merced County EOC during the event with frequent live briefings taking place. In addition the the evacuations the took place in and around Merced, Amtrak cancelled several trains and buses through and into Merced due to the train station being flooded.

The Fresno County Emergency Manager reported that a large segment of SR 168 began to slide around 1300 on January 9 resulting in several large boulders blocking the roadway. This event cut off several smaller communities from medical access via a roadway . A flood warning had already been in place ahead of time, and several daily briefings had been provided to the Fresno County EOC leading up to the event with a deployed resource provided the day of the event. SR 168 remained closed for two days until the rock slide was cleared.

California Highway Patrol reported roadway flooding at the intersection of Plainsburg Rd. and Buchanan Hollow Rd.

A strong low pressure system moved through central California on January 9 and 10. This system picked up a deep moisture fetch of tropical origin while tracking rapidly eastward across the Pacific and produced widespread heavy precipitation across the area between the morning of January 9 and the evening of January 10 while the deep surge of moisture moved inland across central California. This storm produced widespread liquid precipitation totals of 3 to 6 inches in the Sierra Nevada. For much of this event, the snow level was around 7500 feet which resulted in heavy runoff of snow accumulations from recent colder storms. This runoff combined with rainfall of 2 to 4 inches in the Sierra foothills and 1 to 2.5 inches in the San Joaquin Valley to produce widespread flooding across the area with at least 150 separate incidents of flooding being reported to the Hanford NWS office. The flooding resulted in numerous roads being closed and several evacuations took place including the entire town of Planada in Merced County which was inundated with flood waters. In addition, Bear Creek overflowed it's banks and reached a new record peak flood of 26.2 feet at McKee Bridge east of Merced on January 10. Above the snow line, there were several reports of 2 to 4 feet of new snowfall above 7500 feet in the Sierra Nevada. This system also produced strong downslope winds on January 9 with several stations in the Tehachapi Mountains, West Side Hills and Sierra foothills measuring gusts exceeding 60 mph and resulting in several power outages across the area as power lines were blown down by the strong winds. Thunderstorms broke out across the much of the area on January 10 as colder air aloft moved over the area resulting in numerous issuances of Significant Weather Advisories along with a few warnings. The storm moved to the east of the area on January 11 with precipitation ending and winds diminishing. However, flooding continued across much of the area due to residual runoff from the heavy precipitation that fell over the previous two days. Several county Emergency Operations Centers were staffed by NWS personnel during this event do to the unusual severity with this storm as numerous warnings were issued for flooding, strong winds and heavy mountain snowfall.

California Highway Patrol reported a large boulder washed up onto the roadway on SR 140 in Briceburg.				
<p>Another strong low pressure system impacted central California as it moved eastward across northern California on January 14. The deeper moisture associated with this system arrived during the evening on January 13 and the precipitation continued across the area until the evening of January 14 when it finally tapered off. Strong upper jet dynamics associated with this system produced a period of widespread heavy precipitation across the area during the afternoon of January 14. Between 2 and 4 inches of liquid precipitation fell over the Sierra Nevada while 1.5 to 3 inches of rain fell over the adjacent foothills. Most of the San Joaquin Valley only picked up between a quarter of an inch and three quarters of an inch of rain due to rain shadowing effects. Several higher elevation SNOTEL stations picked up between 1.5 and 3 feet of new snowfall above 6000 feet with a few inches of snow falling as low as 4500 feet in the Sierra Nevada as cooler air pushed into the area during the evening of January 14. The main impacts from this system came from flooding which was a result of significant rainfall taking place over already saturated soil and continued runoff from previous storms.</p>

California Highway Patrol reported road 108 was closed between Ave. 368 and Ave. 384 due to flooding.

The strong storm that brought widespread precipitation and additional flooding to the area on January 14 was followed by another storm which moved through the area between the afternoon of January 15 and the afternoon of January 16. While precipitation amounts from this storm were significantly less across most of the area than with the previous two storms which impacted the area over the previous week, this system produced a period of damaging wind gusts in the San Joaquin Valley during the morning of January 16 as the cold front from this system pushed through the area. There were several reports of wind gusts exceeding 40 mph in the San Joaquin Valley and Sierra foothills and wind gusts exceeding 60 mph in the Tehachapi Mountains and the West Side Hills. The strong winds resulted in numerous power outages as power poles and power lines were toppled as well as road closures as the winds brought trees down across roads. Some more flooding occurred in the area as a result of additional rainfall on soil which had been heavily saturated by previous recent storms. The winds did taper off by the afternoon of January 16, but the precipitation was very slow to taper off as the storm didn't completely move out of the area until January 17.

<b>(CA-Z311) HANFORD - CORCORAN - LEMOORE</b>				
	01/17/23 03:00 PST		0	Dense Fog
	01/17/23 09:00 PST		0	

The low pressure system which brought widespread precipitation and damaging wind gusts to the area during the previous two days finally moved east of the area on January 17. Skies cleared out and winds diminished in the western San Joaquin Valley during the early morning which allowed for dense fog to form in Kings and western Fresno County. The fog lowered visibility to below 1000 feet in a few locations and resulted in a few school districts opening late on January 17. The fog dissipated by late morning.

<b>(CA-Z302) MERCED-MADERA-MENDOTA, (CA-Z303) PLANADA-LEGRAND-SNELLING, (CA-Z305) WEST SIDE OF FRESNO AND KINGS COUNTIES, (CA-Z306) CARUTHERS - SAN JOAQUIN - SELMA, (CA-Z309) BUTTONWILLOW- LOST HILLS - I5, (CA-Z310) DELANO - WASCO - SHAFTER, (CA-Z311) HANFORD - CORCORAN - LEMOORE, (CA-Z312) VISALIA - PORTERVILLE - REEDLEY</b>				
	01/21/23 02:00 PST		0	Frost/Freeze
	01/24/23 08:00 PST		0	

A large dry upper high pressure ridge built into California on January 20. With a cool northerly flow aloft and mainly clear skies and light winds prevailing over the San Joaquin Valley, temperatures dropped below the freezing mark for a few hours across the rural areas during the mornings of January 21, 22, 23 and 24.

<b>(CA-Z311) HANFORD - CORCORAN - LEMOORE, (CA-Z312) VISALIA - PORTERVILLE - REEDLEY</b>				
	01/21/23 06:20 PST		0	Dense Fog
	01/21/23 10:26 PST		0	

Clear skies and light winds prevailed over the San Joaquin Valley underneath high pressure during the morning of January 21. As a result, dense fog formed for a few hours across the central portion of the valley which impacted travel on SR 99 and SR 198. The fog dissipated by late morning.

<b>(CA-Z302) MERCED-MADERA-MENDOTA, (CA-Z306) CARUTHERS - SAN JOAQUIN - SELMA, (CA-Z311) HANFORD - CORCORAN - LEMOORE, (CA-Z312) VISALIA - PORTERVILLE - REEDLEY</b>				
	01/22/23 02:55 PST		0	Dense Fog
	01/22/23 09:44 PST		0	

High pressure remained situated over California during the morning of January 22. Mainly clear skies and light winds prevailing over the San Joaquin Valley along with lingering moisture from recent storms made for an ideal situation for widespread dense fog to form in the valley during the early morning hours and persist until late morning when the fog dissipated. Several webcams in the valley showed visibility below 1000 feet and travel along SR 99 was impacted.

	01/23/23 06:50 PST		0	

An upper trough dropped southward into the Great Basin on January 22 and January 23. This trough interacted with high pressure centered offshore which extended into California to produce an offshore gradient which resulted in strong northeast winds over the mountains and deserts of Kern County. Several stations measured gusts exceeding 40 mph with some low impact indicator sites

reporting gusts in excess on 60 mph. The winds diminished by the afternoon of January 23 as the trough moved east and gradients relaxed.

01/25/23 02:45 PST	0	Dense Fog
01/25/23 09:10 PST	0	

An upper ridge of high pressure persisted near the California coast during the morning of January 25. With clear skies and winds prevailing across the San Joaquin Valley, fog formed along the central portion of the valley with visibility being reduced to below a quarter mile along the SR 43 corridor between Selma and Corcoran with travel being impacted along SR 43 as well as along a portion of SR 198 from Hanford eastward to the Kings-Tulare County border. The fog completely dissipated by late morning.

(CA-Z311) HANFORD - CORCORAN - LEMOORE

01/26/23 03:30 PST	0	Dense Fog
01/26/23 07:00 PST	0	

An upper ridge of high pressure remained near the California coast during the morning of January 26. As a result, patches of dense fog formed during the early morning in the San Joaquin Valley with the most noticeable impacts being from Hanford westward to Lemoore. The fog dissipated by late morning.

(CA-Z311) HANFORD - CORCORAN - LEMOORE

01/27/23 06:40 PST	0	Dense Fog
01/27/23 09:55 PST	0	

An upper ridge of high pressure remained near the California coast during the morning of January 27. As a result, patches of dense fog formed near sunrise in the San Joaquin Valley with the most noticeable impacts being in and around Hanford. The fog dissipated by late morning.

01/28/23 05:25 PST	0	Dense Fog
01/28/23 10:25 PST	0	

An upper ridge of high pressure remained near the California coast during the morning of January 28. As a result, an area of dense fog formed in the San Joaquin Valley north of Fresno before sunrise which impacted travel along SR 99 until late morning when the fog dissipated.

(CA-Z306) CARUTHERS - SAN JOAQUIN - SELMA, (CA-Z311) HANFORD - CORCORAN - LEMOORE

01/29/23 07:00 PST	0	Dense Fog
01/29/23 10:00 PST	0	

Although a cold upper low pressure system approached the area from the north during the morning of January 29, an area of dense fog developed around sunrise in the center portion of the San Joaquin Valley between Fresno and Visalia. The fog impacted travel along SR 99 through Fowler, Selma and Kingsburg where web cameras indicated visibility below 1000 feet for a few hours. The fog dissipated by late morning.

(CA-Z335) GRAPEVINE

01/30/23 01:00 PST	0	Winter Weather
01/30/23 10:00 PST	0	

A cold upper low pressure system dropped southward over northern California on January 29 then dropped further southward off the central and southern California coast on January 30. This system provided for enough moisture and dynamics across the area for up to a tenth of an inch of liquid precipitation at several stations with upslope favored areas generally picking up between a tenth and a quarter inch of liquid precipitation. The precipitation initially fell as snow above 4000 feet during the morning of January 30. The snow level lowered to around 2000 feet by the early afternoon of January 30 when the precipitation moved south of the area.

(CA-Z312) VISALIA - PORTERVILLE - REEDLEY, (CA-Z319) FRESNO - TULARE FOOTHILLS, (CA-Z334) TEHACHAPI, (CA-Z335) GRAPEVINE

01/30/23 06:30 PST	0	Dense Fog
01/30/23 20:00 PST	0	

Upslope low clouds formed along the east side of the San Joaquin Valley and the lower Sierra Foothills in Fresno and Tulare Counties in the wake of a cold winter storm which brought some light precipitation to the area during the morning of January 30. The low clouds lowered into a fog layer by sunrise which disrupted the morning commute in the after mentioned areas. Some dense fog also formed as a result of upslope along the valley facing slopes of the Tehachapi Mountains during the afternoon. The fog dissipated by the evening.

	01/30/23 22:50 PST		0	Dense Fog
	01/31/23 10:35 PST		0	

As skies cleared out over the center portion of the San Joaquin Valley with light winds prevailing, an area of dense fog reducing visibility to a few hundred feet formed along a strip from Tulare northward to Madera. The fog impacted travel along SR 99 during the morning commute and resulted in several school districts either opening late or delaying or cancelling bus service. The fog dissipated by late morning.

A cold and dry airmass build into the area during the morning of January 31. Although low clouds and fog kept minimum temperatures up across much of the southern portion of the San Joaquin Valley, nearly all of Merced County and much of the west side of the valley had minimum temperatures drop below the freezing mark for a few hours during the late night and morning of January 31.
