Storm Data and Unusual Weather Phenomena - May 2010

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
----------	-----------	-------------------	---------------------	------------------------

Roads were closed due to flash flooding around Frostburg.

A stationary boundary remained over western Maryland on the 28th. An easterly flow off the Atlantic Ocean pumped in plenty of moisture. Showers and thunderstorms developed near the boundary. Due to a light steering flow aloft showers and thunderstorms were slow to move. Therefore, heavy amounts of rain fell in short periods of time across western Maryland. This resulted in areas of flash flooding.

Storm Data and Unusual Weather Phenomena - May 2010

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
----------	-----------	-------------------	---------------------	------------------------

Quarter size hail was reported near Eheart.

A stationary boundary remained over northern and central Virginia on the 27th. A northwest flow aloft provided cold air advection at the mid-levels of the atmosphere. The combination of warm and humid conditions near the surface and colder air aloft led to moderate amounts of instability. Some of the thunderstorms that developed near the front became severe. Large hail was the primary threat due to the colder air aloft.

Two feet of water was flowing across the intersection of State Route 617 and State Route 620.

A stationary boundary remained over central on the 28th. An easterly flow off the Atlantic Ocean pumped in plenty of moisture. Showers and thunderstorms developed near the boundary. Due to a light steering flow aloft showers and thunderstorms were slow to move. Therefore, heavy amounts of rain fell in short periods of time across portions of central Virginia.

A wind gust of 60 mph was measured about one mile north-northwest of Elk Garden.				
High pressure over the western Atlantic pumped in plenty of warm and humid air on the 14th. An upper-level disturbance passed through the region during the afternoon and evening hours, bringing showers and thunderstorms. Moderate to high amounts of instability was present due to relatively colder air aloft and warm, moist air at the surface. This caused thunderstorms to become severe with large hail being the primary threat.

Quarter size hail was reported near Mathias.				
A stationary boundary remained over eastern West Virginia on the 27th. A northwest flow aloft provided cold air advection at the mid-levels of the atmosphere. The combination of warm and humid conditions near the surface and colder air aloft led to moderate amounts of instability. Some of the thunderstorms that developed near the front became severe. Large hail was the primary threat due to the colder air aloft.
