Goose Reef Buoy 44062 reported gusts of 35 knots.				
A cold front slowly approached and moved south through the Mid Atlantic late in the day. Ahead of the front, southerly flow ushered in a warm and moisture air mass, resulting in MLCAPE values between 1000-1500 J/kg with marginal shear. Numerous showers and thunderstorms with embedded severe formed to the southwest and progressed to the northeast prior to the cold frontal passage.				
TANGIER SOUND AND THE INLAND WATERS SURROUNDING BLOODSWORTH ISLAND COUNTY --- CRISFIELD [37.97, -75.88]

Susquehanna Buoy 44057 reported gusts between 31 and 34 knots.				
Destabilization occurred west of the Blue Ridge with MLCAPE 1500-2000 J/Kg forming by the afternoon hours. Backing of winds also led to increased shear profiles, which combined with the increased instability produced isolated thunderstorms ahead of an approaching cold front and a line of showers and strong thunderstorms right along the line.				
CHESAPEAKE BAY DRUM PT TO SMITH PT VA COUNTY --- PATUXENT RIVER ASOS [38.29, -76.41]

	06/14/15 19:14 EST		0	Source: Mesonet
COB reported a gusts between 37 and 43 knots.				
A weak surface boundary slipped south into northern Virginia during the day. Plenty of warming and increasing moisture advection led to destabilization, with SBCAPE values between 1000-2000 J/kg across much of the area. Increasing unidirectional 0-6 km bulk shear late in the day, with values between 20-25 knots, combined with the unstable air mass and with a passing shortwave, produced scattered thunderstorms.

NRTBY reported gusts of 34 knots.				
The Mid-Atlantic remained in the warm sector as a nearly stalled warm front lingered just north of the Mason-Dixon line and the associated cold front swung in from the west by the evening. The unstable air mass led to SBCAPE values between 2000-3500 J/kg while effective shear values were between 30-40 knots.

	06/20/15 23:19 EST		0	Source: Mesonet

RAC reported gusts between 33 and 34 knots.

A stalled frontal boundary acted as the triggering point for an initial line of showers and thunderstorms, with many of the storms becoming severe with strong moisture advection combining with diurnal heating and leading to an unstable air mass. The remnants of Tropical System Bill moved through the Mid-Atlantic overnight, continuing the severe threat late into the early part of the overnight hours.

BWH reported gusts between 31 and 39 knots.				
Potent low pressure passed by to our west, and the warm front associated with the low moved through our area during this time. Warm and moist air near and south of the boundary led to an unstable atmosphere, while forcing from the warm front provided the lift, resulting in scattered, then a line of thunderstorms.

CCK reported gusts of 38 knots.				
<p>A warm front passed through the area while an upper-level trough approached from the west. A southerly flow behind the front caused an unstable atmosphere, and moderate amounts of instability developed due to colder air aloft ahead of the approaching trough. There was enough instability for some thunderstorms to become severe as a cold front approached from the west.</p>

A large tree limb was reported down along Hobart St NW.				
<p>A cold front slowly approached and moved south through the Mid Atlantic late in the day. Ahead of the front, southerly flow ushered in a warm and moisture air mass, resulting in MLCAPE values between 1000-1500 J/kg with marginal shear. Numerous showers and thunderstorms with embedded severe formed to the southwest and progressed to the northeast prior to the cold frontal passage.</p>				
DISTRICT OF COLUMBIA COUNTY --- 1.3 WSW GEORGETOWN [38.91, -77.07]				

Storm Data and Unusual Weather Phenomena - June 2015

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
	06/14/15 16:33 EST		1K	Thunderstorm Wind (EG 52 kt)
	06/14/15 16:33 EST		0	Source: 911 Call Center

A tree was reported down at the intersection of 37th St NW and Reservoir Rd NW.

A weak surface boundary slipped south into northern Virginia during the day. Plenty of warming and increasing moisture advection led to destabilization, with SBCAPE values between 1000-2000 J/kg across much of the area. Increasing unidirectional 0-6 km bulk shear late in the day, with values between 20-25 knots, combined with the unstable air mass and with a passing shortwave, produced scattered thunderstorms, some becoming severe.

DISTRICT OF COLUMBIA COUNTY --- 1.8 SW BROOKLAND [38.91, -77.02]

06/20/15 20:30 EST	2K	Thunderstorm Wind (EG 52 kt)
06/20/15 20:30 EST	0	Source: 911 Call Center

Numerous reports of trees down around the District.

A stalled frontal boundary acted as the triggering point for an initial line of showers and thunderstorms, with many of the storms becoming severe with strong moisture advection combining with diurnal heating and leading to an unstable air mass. The remnants of Tropical System Bill moved through the Mid-Atlantic overnight, continuing the severe threat late into the early part of the overnight hours.

DISTRICT OF COLUMBIA COUNTY --- 1.1 SW WALTER REED [38.97, -77.05], 1.4 WSW WALTER REED [38.97, -77.05], 1.1 WSW WALTER REED [38.98, -77.05], 0.8 SW WALTER REED [38.97, -77.04]

06/27/15 15:24 EST	0	Flash Flood (due to Heavy Rain)
06/27/15 23:25 EST	0	Source: River/Stream Gage

The stream gauge on Rock Creek at Rock Creek/Sherrill Drive reached a flood stage of 7 feet. The river crested at 8.20 feet at 17:45 EST. Water reached several portions of the Valley Trail between Picnic Areas 7 and 10 in Rock Creek Park. Water also approached Jewett Street near the Smithsonian National Zoo.

Potent low pressure passed by to our west, and the warm front associated with the low moved through our area during this time. Warm and moist air near and south of the boundary led to an unstable atmosphere, while forcing from the warm front provided the lift. Thunderstorms developed and produced copious amounts of rainfall east of the Blue Ridge Mountains.

MARYLAND, Central

ST. MARY'S COUNTY --- 0.4 SE CALIFORNIA [38.30, -76.49]

06/01/15 14:14 EST	1K	Thunderstorm Wind (EG 52 kt)

	06/02/15 00:00 EST		0	Source: Department of Highways

Maryland route 97 was reported flooded and closed at Reddy Branch in Brookeville.

A cold front slowly approached and moved south through the Mid Atlantic late in the day. Ahead of the front, southerly flow ushered in a warm and moist air mass. Numerous showers and thunderstorms with embedded strong to severe storms formed to the southwest and progressed to the northeast prior to the cold frontal passage. This activity produced copious amounts rain and led to flash flooding across northeast Maryland.

(MD-Z502) CENTRAL AND EASTERN ALLEGANY

	06/06/15 04:00 EST		0	Dense Fog
	06/06/15 06:25 EST		0	

Increasing moisture ahead of an approaching cold front led to valley dense fog development.

A tree was reported down at the 6900 block of Kellys Store Rd.				
<p>A weak surface boundary slipped south into northern Virginia during the day. Plenty of warming and increasing moisture advection led to destabilization, with SBCAPE values between 1000-2000 J/kg across much of the area. Increasing unidirectional 0-6 km bulk shear late in the day, with values between 20-25 knots, combined with the unstable air mass and with a passing shortwave, produced scattered thunderstorms, some becoming severe.</p>

	06/20/15 18:39 EST		5K	Tornado (EF0, L: 1.47 mi , W: 75 yd)
	06/20/15 18:45 EST		0	Source: NWS Storm Survey
A team from the National Weather Service in Sterling, VA conducted a ground survey of tornado damage along a 1.5 mile path beginning near the intersection of Tuscarora Road and Buckeystown Pike, then moved northeast to Greenfield Road. Based on this survey along with radar data, the team determined an EF-0 tornado occurred along this path.				
The tornado was approximately 75 yards wide with maximum winds of 65 mph. Large tree branches were snapped half way up and trees were nearly pushed over from south to north near the intersection of Tuscarora Road and Buckeystown pike . Additional tree damage occurred at two residences just north of the intersection. Another small tree was snapped over in a southeast to northwest direction about one half mile north of the residences. A large tree was snapped over at the base in a north to south direction at a residence just off Buckeystown Pike near Greenfield Road. On the backside of the residence and along Greenfield Road, an additional large tree branch was also snapped in a north to south direction. No additional damage was noted to the north of Greenfield Road.

A tree was reported down across Beachville Rd.				
A stalled frontal boundary acted as the triggering point for an initial line of showers and thunderstorms, with many of the storms becoming severe with strong moisture advection combining with diurnal heating and leading to an unstable air mass. The remnants of Tropical System Bill moved through the Mid-Atlantic overnight, continuing the severe threat late into the early part of the overnight hours. As winds backed with the tropical system, increasing directional and magnitude shear led to the development of tornadoes.

Storm Data and Unusual Weather Phenomena - June 2015

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
A cold front moved south through the region. Southerly flow ahead of the front led to an unstable air mass, which combined with steepening mid level lapse rates and increased sheer led to numerous severe thunderstorms being triggered right ahead of the front. Some thunderstorms produced copious amounts of rainfall and led to flooding around the Baltimore and Washington DC metros.				
<hr/>				
CHARLES COUNTY --- 0.5 S MORGANTOWN [38.34, -76.97], 0.3 NW WAYSIDE [38.35, -76.94]	06/27/15 15:28 EST		0.50M	Tornado (EF1, L: 2.02 mi , W: 100 yd)
	06/27/15 15:36 EST		0	Source: NWS Storm Survey

A team from the National Weather Service in Sterling Virginia concluded that a tornado struck southern Charles County just south of the US -301 Bridge at Morgantown.

The tornado peaked at EF-1 intensity with winds of 90 mph produced damage beginning at the Potomac River Shoreline in Morgantown. The tornado moved northeast along Morgantown Road, ending its damage path just after it crossed over Route 257-Rock Point Road.

While on the ground through Morgantown and along Morgantown Road, the tree damage was substantial with dozens of large trees snapped and uprooted in multiple directions along its path. It took several crews hours to remove numerous large trees and restore access down Morgantown Road. Many homes had some of their shingles removed and siding damage, and at least one home had roofing materials removed along the roof edge. More substantial structural damage was mainly limited to destroyed outbuildings and carports, except where trees fell on homes.

The damage coincided with a tornadic signature on National Weather Service and FAA Doppler Radars .

<hr/>				
CHARLES COUNTY --- 1.5 WSW ISSUE [38.29, -76.91], 1.6 E WOODBERRY BEACH [38.32, -76.84]	06/27/15 15:32 EST		3K	Tornado (EF0, L: 3.89 mi , W: 800 yd)
	06/27/15 15:41 EST		0	Source: NWS Storm Survey

National Weather Service in Sterling Virginia has concluded that a tornado struck southern Charles County before traveling into Saint Marys County .

The tornado began near the Swan Point Golf Course in Issue Maryland. The tornado crossed Route 257 near the Holy Ghost Church Church near Hatton Creek Road uprooting numerous trees along its path.

<hr/>				
ST. MARY'S COUNTY --- 1.1 SW MILLS PT SHRS [38.32, -76.84], 1.0 NE OAKVILLE [38.39, -76.64]	06/27/15 15:41 EST		10K	Tornado (EF1, L: 12.22 mi , W: 800 yd)
	06/27/15 16:07 EST		0	Source: NWS Storm Survey

National Weather Service in Sterling Virginia has concluded that a tornado struck Saint Marys County .

The tornado entered just south of Maddox Maryland around the South View Lane and Nottley Hall Road . The tornado moved northeast through rural farmland and forested areas before moving between Chaptico and Clements. The tornado crossed the intersection of Route 238 and Horseshoe Road before continuing northeast through rural areas. The tornado then passed through Morganza and Loveville, passing over the property of Chopticon High School. The last significant damage was along Route 235 between North and South Sandgates Roads, near Oakville Maryland.

The majority of damage along the path was substantial tree damage, and damage to several homes from falling trees. There were several barns and outbuildings flattened, and some minor siding and shingle damage was noted on some homes. Chopticon High School had damage to bleachers and sporting fields.

The damage coincided with a tornadic signature on National Weather Service and FAA Doppler Radars .

Potent low pressure passed by to our west, and the warm front associated with the low moved through our area during this time. Warm and moist air near and south of the boundary led to an unstable atmosphere, while forcing from the warm front provided the lift. Thunderstorms developed, and with potent shear profiles around the warm front isolated thunderstorms did produce tornadoes.

<hr/>				
HOWARD COUNTY --- 2.4 NNW WOODSTOCK [39.36, -76.99], 2.4 NNW WOODSTOCK [39.36, -76.99], 2.4 NNW WOODSTOCK [39.36, -76.99], 2.4 NNW WOODSTOCK [39.36, -76.99]	06/27/15 15:30 EST		0	Flash Flood (due to Heavy Rain)

	06/28/15 12:21 EST		0	Source: River/Stream Gage
The stream gauge on the Western Branch at Upper Marlboro reached a flood stage of 11 feet. The river crested at 11.65 feet at 06:30 EST. The Water Street bridge was completely covered by water.				
Potent low pressure passed by to our west, and the warm front associated with the low moved through our area during this time. Warm and moist air near and south of the boundary led to an unstable atmosphere, while forcing from the warm front provided the lift. Thunderstorms developed and produced copious amounts of rainfall east of the Blue Ridge Mountains.				
HARFORD COUNTY --- 1.3 ESE ROCKS [39.62, -76.40]

PRINCE GEORGE'S COUNTY --- 1.5 SSE HALL [38.88, -76.72]				
	06/30/15 23:28 EST		1K	Thunderstorm Wind (EG 52 kt)
	06/30/15 23:28 EST		0	Source: 911 Call Center
A tree was reported down at the intersection of Crane Highway and Trade Zone Ave.				
A warm front passed through the area while an upper-level trough approached from the west. A southerly flow behind the front caused an unstable atmosphere, and moderate amounts of instability developed due to colder air aloft ahead of the approaching trough. There was enough instability for some thunderstorms to become severe as a cold front approached from the west.

Multiple trees were reported down along Buck Mountain Rd. Reported by Channel 29 from Charlottesville.				
A cold front slowly approached and moved south through the Mid Atlantic late in the day. Ahead of the front, southerly flow ushered in a warm and moisture air mass, resulting in MLCAPE values between 1000-1500 J/kg with marginal shear. Numerous showers and thunderstorms with embedded severe formed to the southwest and progressed to the northeast prior to the cold frontal passage.

GREENE COUNTY --- 1.5 SSE RUCKERSVILLE [38.21, -78.36], 1.5 SSE RUCKERSVILLE [38.21, -78.36], 1.6 SSE RUCKERSVILLE [38.21, -78.36], 1.6 SSE RUCKERSVILLE [38.21, -78.36]	06/01/15 22:15 EST		0	Flash Flood (due to Heavy Rain)
	06/02/15 22:57 EST		0	Source: 911 Call Center
The 1500 block of route 616 was closed due to water over the bridge. VDOT reopened Carpenters Mill Road the following morning.				
A cold front slowly approached and moved south through the Mid Atlantic late in the day. Ahead of the front, southerly flow ushered in a warm and moist air mass. Numerous showers and thunderstorms with embedded strong to severe storms formed to the southwest and progressed to the northeast prior to the cold frontal passage. This activity produced copious amounts rain and led to flash flooding across the Central Foothills.

A tree was reported down at the 300 block of North Virginia Ave.

Destabilization occurred west of the Blue Ridge with MLCAPE 1500-2000 J/Kg forming by the afternoon hours. Backing of winds also led to increased shear profiles, which combined with the increased instability produced isolated thunderstorms ahead of an approaching cold front and a line of showers and thunderstorms right along the line.

WINCHESTER (C) COUNTY --- 3.0 SSW WINCHESTER [39.09, -78.18]				
	06/12/15 16:35 EST		1K	Thunderstorm Wind (EG 52 kt)
	06/12/15 16:35 EST		0	Source: Trained Spotter

Trained spotter ID WCS07 reported trees down, blocking Hume Rd.

High pressure residing off the east coast resulted in southerly flow over the Mid-Atlantic, ushering in a warm and moist air mass. A weak cold front moved through late in the day, bringing a line of broken showers and embedded thunderstorms.

ARLINGTON COUNTY --- 1.3 N ROSSLYN [38.90, -77.08]				
	06/14/15 16:32 EST		1K	Thunderstorm Wind (EG 52 kt)
	06/14/15 16:32 EST		0	Source: 911 Call Center

A tree was reported down at the intersection of North Quinn St and 21st Rd North.

ARLINGTON COUNTY --- 1.1 S ROSSLYN [38.86, -77.08]				
	06/14/15 16:35 EST		1K	Thunderstorm Wind (EG 52 kt)
	06/14/15 16:35 EST		0	Source: 911 Call Center

A tree was reported down in the 1900 block of Columbia Pike.

A weak surface boundary slipped south into northern Virginia during the day. Plenty of warming and increasing moisture advection led to destabilization, with SBCAPE values between 1000-2000 J/kg across much of the area. Increasing unidirectional 0-6 km bulk shear late in the day, with values between 20-25 knots, combined with the unstable air mass and with a passing shortwave, produced scattered thunderstorms, some becoming severe.

	06/20/15 18:27 EST		50K	Tornado (EF0, L: 2.08 mi , W: 100 yd)
	06/20/15 18:32 EST		0	Source: NWS Storm Survey
National Weather Service personnel completed a ground survey along with radar analysis and concluded a small tornado produced damage along a 2.1 mile path beginning near the intersection of Virginia State Route 28/Nokesville road/ and Linton Hall Road. The tornado then moved northeast along Route 28, ending it's damage path at the baseball fields at the intersection of Godwin road and Route 28.				
The tornado's path width was approximately 100 yards. The bulk of the damage occurred at the Broad Run golf training center where about a half-dozen softwood trees between 12 and 18 inches in diameter were snapped approximately 4 feet above the ground. The damage at the baseball fields at the intersection of Route 28 and Godwin Road included a scoreboard secured by 4x4s being snapped, along with baseball dugout roofs lifted and blown away. The damage was sporadic along the 2.1 mile path, but coincided with the tornadic signature as depicted on WSR-88D and FAA Terminal Doppler weather radar. No additional damage was noted northeast of Godwin road.

Two trees were reported down on power lines.				

Storm Data and Unusual Weather Phenomena - June 2015

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
----------	-----------	-------------------	---------------------	------------------------

A stalled frontal boundary acted as the triggering point for an initial line of showers and thunderstorms, with many of the storms becoming severe with strong moisture advection combining with diurnal heating and leading to an unstable air mass. The remnants of Tropical System Bill moved through the Mid-Atlantic overnight, continuing the severe threat late into the early part of the overnight hours. As winds backed with the tropical system, increasing directional and magnitude shear led to the development of tornadoes.

PRINCE WILLIAM COUNTY --- 0.9 SE DALE CITY [38.61, -77.29], 0.8 SE DALE CITY [38.61, -77.29], 0.8 SSE DALE CITY [38.61, -77.29], 0.9 SE DALE CITY [38.61, -77.29]

The intersection of Naomi Road and Jett Drive were closed due to high water.

Potent low pressure passed by to our west, and the warm front associated with the low moved through our area during this time. Warm and moist air near and south of the boundary led to an unstable atmosphere, while forcing from the warm front provided the lift. Thunderstorms developed and produced copious amounts of rainfall east of the Blue Ridge Mountains.

FREDERICKSBURG (C) COUNTY --- 2.5 W FREDERICKSBURG [38.31, -77.52]

06/27/15 14:14 EST	1K	Thunderstorm Wind (EG 50 kt)

	06/01/15 20:29 EST		0	Source: Trained Spotter
Archer Road in Middleway was flooded with about six to eight inches of flowing water.				
<p>A cold front slowly approached and moved south through the Mid Atlantic late in the day. Ahead of the front, southerly flow ushered in a warm and moist air mass. Numerous showers and thunderstorms with embedded strong to severe storms formed to the southwest and progressed to the northeast prior to the cold frontal passage. This activity produced copious amounts rain and led to flash flooding across the eastern panhandle of West Virginia.</p>				
(WV-Z504) EASTERN MINERAL

A tree was reported down at Limestone Rd and Knobbly Rd.

HARDY COUNTY --- 0.5 E FABIUS [39.10, -78.82]

	06/20/15 16:27 EST		1K	Thunderstorm Wind (EG 52 kt)
	06/20/15 16:27 EST		0	Source: 911 Call Center

Multiple trees were reported down on Upper Skaggs Rd.

HAMPSHIRE COUNTY --- 0.5 E KIRBY [39.18, -78.72]

	06/20/15 16:34 EST		1K	Thunderstorm Wind (EG 52 kt)
	06/20/15 16:34 EST		0	Source: Trained Spotter

Multiple trees reported down along Grassy Lick Rd. Reported by HM015.

A stalled frontal boundary acted as the triggering point for an initial line of showers and thunderstorms, with many of the storms becoming severe with strong moisture advection combining with diurnal heating and leading to an unstable air mass.

HAMPSHIRE COUNTY --- 1.1 E CAPON BRIDGE [39.30, -78.43]

	06/23/15 16:19 EST		1K	Thunderstorm Wind (EG 52 kt)
	06/23/15 16:19 EST		0	Source: 911 Call Center

A tree was reported down at the 500 block of Christian Church Rd.

JEFFERSON COUNTY --- 0.5 E MT PLEASANT [39.25, -77.94]

	06/23/15 16:37 EST		0	Hail (1.00 in)
	06/23/15 16:37 EST		0	Source: Trained Spotter

A cold front moved south through the region. Southerly flow ahead of the front led to an unstable air mass, which combined with steepening mid level lapse rates and increased sheer led to numerous severe thunderstorms being triggered right ahead of the front.

JEFFERSON COUNTY --- 1.2 ESE SHEPHERDSTOWN [39.42, -77.78]

	06/30/15 20:44 EST		2K	Thunderstorm Wind (EG 52 kt)
	06/30/15 20:44 EST		0	Source: Trained Spotter

Multiple trees were down along Trough Goad north of Old Stonehouse Road. Trees were estimated to be around three feet in diameter.

A warm front passed through the area while an upper-level trough approached from the west. A southerly flow behind the front caused an unstable atmosphere, and moderate amounts of instability developed due to colder air aloft ahead of the approaching trough. There was enough instability for an isolated storm to become severe in the Eastern Panhandle.
