Storm Data and Unusual Weather Phenomena - June 2017

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
The National Weather Service in Baltimore MD/Washington DC has confirmed a tornado in the Four Corners section of Silver Spring in Montgomery County Maryland on June 19, 2017.				
The National Weather Service conducted a ground survey of the damaged community . The survey was greatly assisted by Montgomery Countys Office of Emergency Management. An eyewitness reported damaging winds blowing to the east, followed immediately by damaging winds blowing west. This aligns with a small, weak rotation noted on FAAs Terminal Doppler Weather Radar located at Joint Base Andrews. The damage area was very compact, with most of the damage confined to a wooded community along a two block stretch of Dennis Avenue, between Royalton Road and Eastwood Avenue. Damage was entirely to trees and objects/homes that trees fell on. Most of the damage was to and the result of moderate sized branches of tulip poplars about 8 to 12 inches in diameter. Two trees were uprooted as well. Homes, vehicles, and power lines were damaged from falling trees and branches, with some homes rendered uninhabitable. No structural damage was noted that was not the result of falling trees. While much of the tree damage was from an easterly wind, there was damage noted in multiple directions. Most of the tree damage was to the higher branches. No injuries or fatalities were reported as of the evening of the survey. The entire event likely transpired in less than a minute.				
PRINCE GEORGE'S COUNTY --- 0.8 NE BERWYN [38.99, -76.92]				
	06/19/17 14:49 EST	0		Thunderstorm Wind (EG 50 kt)

Storm Data and Unusual Weather Phenomena - June 2017

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
	06/16/17 17:25 EST		0	Flood (due to Heavy Rain)
	06/16/17 22:15 EST		0	Source: 911 Call Center

There was high standing water on Route 9 in Paw Paw.

A warm front moved northward across the Mid-Atlantic region and southerly flow transported moisture into the region. Breaks in sunshine led to increased instability and showers and thunderstorms formed and produced very heavy rain that led to flooding.
