

## Storm Data and Unusual Weather Phenomena - December 2018

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
<b>DISTRICT OF COLUMBIA</b>				
<b>DISTRICT OF COLUMBIA COUNTY --- 1.3 SW WALTER REED [38.97, -77.05], 0.7 SW WALTER REED [38.97, -77.04], 0.5 WSW WALTER REED [38.98, -77.04], 0.6 WSW WALTER REED [38.98, -77.04], 1.0 SW WALTER REED [38.97, -77.05], 1.4 SW WALTER REED [38.97, -77.05]</b>				
	12/15/18 20:25 EST	0		Flood (due to Heavy Rain)
	12/16/18 07:30 EST	0		Source: River/Stream Gage
The stream gage on Rock Creek at Sherrill Drive/DC exceeded the 7 foot flood stage during the indicated period. Water reached several portions of the Valley Trail between Picnic Areas 7 and 10 in Rock Creek Park, and completely covered the Rolling Meadows Trailbridge. The peak level of 8.02 feet occurred at 3:45 AM on the 16th.				
A potent upper-level low and associated area of surface low pressure approached the region from southwest on the 15th. Strong forcing for ascent and ample moisture transport in advance of the upper level low led to a prolonged period of rain across the region. Eventually low pressure transferred to the coast before precipitation wound down on the 16th. Widespread rainfall totals of 2-4 inches were observed across the area.				
<b>(DC-Z001) DISTRICT OF COLUMBIA</b>				
	12/17/18 00:47 EST	0		Coastal Flood
	12/18/18 08:30 EST	0		
An influx of freshwater due to heavy rain led to increased water level anomalies and coastal flooding along the Potomac River.				
<b>(DC-Z001) DISTRICT OF COLUMBIA</b>				
	12/21/18 17:52 EST	0		Coastal Flood
	12/21/18 19:32 EST	0		
Increased southerly and onshore flow in addition to an influx of freshwater due to heavy rain led to increased water level anomalies and coastal flooding along the Potomac River.				
<b>(DC-Z001) DISTRICT OF COLUMBIA</b>				
	12/29/18 00:23 EST	0		Dense Fog
	12/29/18 05:03 EST	0		
Clearing skies, falling temperatures, and abundant low level moisture led to the formation of dense fog.				
<b>MARYLAND, Central</b>

## Storm Data and Unusual Weather Phenomena - December 2018

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
<b>(MD-Z017) ST. MARY'S</b>				
	12/09/18 13:00 EST		0	Winter Storm
	12/09/18 21:00 EST		0	
<p>An area of low pressure developed along the Gulf Coast on December 8th and tracked northeastward along the North and South Carolina coastlines during the daytime hours on the 9th, strengthening to around 1000mb by the evening. The low then exited eastward off the coast of Cape Hatteras and weakened on the night of the 9th. Accumulating snow was brought to southern Maryland, with a sharp cutoff to completely dry conditions from the Capitol Beltway northward.</p>

## Storm Data and Unusual Weather Phenomena - December 2018

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
----------	-----------	-------------------	---------------------	------------------------

The river gage on the Potomac River at Little Falls exceeded the 10 foot flood stage during the indicated period. Water covered many locations along the C&O Canal towpath, and many hiking trails along the Potomac between Pennyfield Lock and Little Falls were closed as a result of the flooding. The peak level of 11.56 feet occurred at 1:00 PM on December 17th.

**A potent upper-level low and associated area of surface low pressure approached the region from southwest on the 15th. Strong forcing for ascent and ample moisture transport in advance of the upper-level low led to a prolonged period of rain across the region. Eventually low pressure transferred to the coast before precipitation wound down on the 16th. Widespread rainfall totals of 2-4 inches were observed across the area.**

A tree was blown down blocking MD-832 Old Taneytown Road near Richardson Road.				
<p>A surface low tracked northeastward through the Appalachians as a potent jetstreak in the upper levels shifted northward. Unseasonably warm and moist air was transported northward and this, in combination with colder air moving in at the mid-levels, caused the atmosphere to destabilize, resulting in showers and thunderstorms. A few of these storms became locally severe.</p>

	12/22/18 20:03 EST		0	Flood (due to Heavy Rain)
	12/23/18 23:37 EST		0	Source: River/Stream Gage
The river gage on the Potomac River at Edwards Ferry exceeded the 15 foot flood stage during the indicated period. Water reached the boat ramp and lower parking area at Edwards Ferry, and began to inundate areas near Whites Ferry. The peak level of 16.08 feet occurred at 9:00 AM on the 23rd.				
<p>Following immediately on the heels of the system that produced flooding on the 20th in VA, another wave of low pressure tracked up along the spine of the Appalachians on the 21st. Showers and thunderstorms moved across the area during the afternoon hours of the 21st, locally producing an additional 1-2 inches of rain on top of previously saturated soils. This rainfall eventually led to some larger-stem river flooding on the 22nd and 23rd as the runoff drained downstream.</p>

	12/09/18 21:00 EST		0	

An area of low pressure developed along the Gulf Coast on December 8th and tracked northeastward along the North and South Carolina coastlines during the daytime hours on the 9th, strengthening to around 1000mb by the evening. The low then exited eastward off the coast of Cape Hatteras and weakened on the night of the 9th. Widespread significant snow was brought to central Virginia, with a sharp cutoff to completely dry conditions across far northern Virginia.

(WV-Z505) WESTERN PENDLETON	12/04/18 21:00 EST	0	0	Winter Weather
	12/05/18 16:00 EST	0	0	

An upper level disturbance tracked eastward from the Ohio Valley in the morning of December 5th. This moved across the region during the morning hours, aided by the left front quadrant of an upper jetmax. The disturbance then exited during the afternoon hours. Areas of light snow moved across portions of the region, although meaningful accumulations were confined to the higher elevations.

---

(WV-Z506) EASTERN PENDLETON	12/09/18 11:00 EST	0	0	Winter Weather
	12/09/18 21:00 EST	0	0	

An area of low pressure developed along the Gulf Coast on December 8th and tracked northeastward along the North and South Carolina coastlines during the daytime hours on the 9th, strengthening to around 1000mb by the evening. The low then exited eastward off the coast of Cape Hatteras and weakened on the night of the 9th. Accumulating snow clipped portions of eastern WV, with a sharp cutoff to completely dry conditions north of Pendleton County.

<p><b>MORGAN COUNTY --- 3.1 SSW GREAT CACAPON [39.58, -78.31], 2.6 WNW ROCK GAP [39.54, -78.33], 2.6 NE LARGENT [39.51, -78.35], 2.4 NNE LARGENT [39.51, -78.36], 3.3 WNW ROCK GAP [39.55, -78.33], 3.1 SW GREAT CACAPON [39.59, -78.32]</b></p>				
	12/22/18 10:48 EST		0	Flood (due to Heavy Rain)
	12/22/18 17:07 EST		0	Source: River/Stream Gage
<p>The stream gage on the Cacapon River at Great Cacapon exceeded the 9 foot flood stage during the indicated period. Rock Ford Road flooded in multiple locations, including flowing completely over the low water bridge. Flooding was also observed along Constant Run Road. The peak level of 9.28 feet occurred at 1:00 PM.</p>				
<p><b>Following immediately on the heels of the system that produced flooding on the 20th in VA, another wave of low pressure tracked up along the spine of the Appalachians on the 21st. Showers and thunderstorms moved across the area during the afternoon hours of the 21st, locally producing an additional 1-2 inches of rain on top of previously saturated soils. This rainfall eventually led to some larger-stem river flooding on the 22nd and 23rd as the runoff drained downstream.</b></p>
