	07/02/19 20:24 EST		0	Source: Buoy
<hr/>				
<p>Increasing temperatures and low level moisture led to developing instability across the region during the day of July 2nd. The strongest mid-level forcing remained to the north across northern PA/OH where a stationary boundary lingered. However a weak upper level shortwave trough moving through did help showers and scattered thunderstorms to develop across the area, and given the instability a few produced gusty winds over the waters.</p>				
<hr/>				
TIDAL POTOMAC INDIAN HD TO COBB IS MD COUNTY --- QUANTICO (KNYG) [38.51, -77.30]

<hr/>				
<p>Heat and plentiful low level moisture led to the development of instability and therefore scattered showers and thunderstorms during the afternoon of July 4th. While forcing was limited, one of the thunderstorms did briefly produce gusty winds over portions of the waters.</p>

<p>A cold front approached from the west during the day of July 11th, with warm and moist air advection occurring on southerly flow. This promoted the development of significant amounts of instability, and that coupled with an approaching shortwave trough and modest shear values, led to the generation of scattered showers and thunderstorms, some of which produced gusty winds over the waters.</p>

On July 17th, the remnant circulation of Barry moved into Pennsylvania with a surface pressure trough out ahead of it over the Mid-Atlantic. Out ahead of the circulation, a hot, humid, and unstable air mass was in place, and this helped to initiate scattered to numerous showers and thunderstorms in the afternoon. Some of these thunderstorms produced gusty winds over the waters.

An upper level ridge that was in place began to break down during the afternoon hours of July 21st as a cold front moved through the Midwest and an upper-level trough dug into the northern Plains. This allowed additional moisture into the area and when combined with a weakening capping inversion from height falls it was enough for scattered showers and thunderstorms to develop. With substantial instability, some of these thunderstorms producing gusty winds over the waters.

<p>Falling heights, an increasing southwest flow aloft, an approaching cold front, and strengthening pressure trough overhead combined with instability from a hot and humid air mass in place to trigger showers and thunderstorms during the afternoon hours of July 22nd. With high levels of CAPE and increased shear profiles, thunderstorms became strong to severe as they organized into linear structures, and produced gusty winds over the waters.</p>

	07/31/19 18:22 EST		0	Source: Buoy

A surface front moved slowly through the Ohio Valley on the afternoon of July 31st, with a secondary surface trough positioned just east of the I-95 corridor. Aloft, an upper level trough slowly moved across the region. As instability increased during the afternoon hours, scattered showers and thunderstorms developed, and a few brought gusty winds to portions of the waters.

Approximately four dozen trees were blown down from just north of downtown DC into southeast DC and Anacostia, with some onto cars and houses. DC-295 was also blocked by downed trees. A wind gust to 57 knots (66 mph) was measured at Nationals Park.

An approaching cold front coupled with upper level shortwave energy and instability across the region led to the development of afternoon scattered showers and thunderstorms. Several of these thunderstorms became severe.

Arizona Avenue NW was closed due to flooding between Canal Road and Macarthur Boulevard.

Storm Data and Unusual Weather Phenomena - July 2019

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
----------	-----------	-------------------	---------------------	------------------------

A nearly stationary boundary set up near the Potomac River weak low pressure developed along the boundary. There was plenty of moisture in place from the Atlantic and Gulf of Mexico, and this combined with instability to produce very heavy rainfall rates in convection that developed. Convection was maximized around the boundary across around Washington DC, and this led to several instances of flooding and flash flooding.

DISTRICT OF COLUMBIA COUNTY --- 0.3 ESE WALTER REED [38.98, -77.02]

07/11/19 14:55 EST	0	Thunderstorm Wind (EG 50 kt)
07/11/19 14:55 EST	0	Source: Local Official

A tree was blown down near the intersection of 16th Street Northwest and Varnum Street Northwest. A tree was also blown down in the 7300 block of 8th Street Northwest.

A cold front approached from the west during the day of July 11th, with warm and moist air advection occurring on southerly flow. This promoted the development of significant amounts of instability, and that coupled with an approaching shortwave trough and modest shear values, led to the generation of scattered showers and thunderstorms, some of which became severe.

(DC-Z001) DISTRICT OF COLUMBIA

07/17/19 10:00 EST	0	Heat
07/17/19 17:21 EST	0

A tree was blown down onto power lines at 43rd Street Northwest and Yuma Street Northwest.

On July 17th, the remnant circulation of Barry moved into Pennsylvania with a surface pressure trough out ahead of it over the Mid-Atlantic. Out ahead of the circulation, a hot, humid, and unstable air mass was in place, and this helped to initiate scattered to numerous showers and thunderstorms in the afternoon. Some of these thunderstorms became strong to locally severe.

A large tree was blown down into a residence on Pine Street in Havre de Grace. A tree was also blown down onto wires on Oakington Road near US-40.				
Increasing temperatures and low level moisture led to developing instability across the region during the day of July 2nd. The strongest mid-level forcing remained to the north across northern PA/OH where a stationary boundary lingered. However a weak upper level shortwave trough moving through did help showers and scattered thunderstorms to develop across the state, and given the instability a few became severe.				
PRINCE GEORGE'S COUNTY --- 1.3 ENE COLLINGTON [38.98, -76.75]

The water level rose to the flood stage of 7 feet along the Mattowoman Creek at Pomonkey. The water level crested at 7.43 feet at 10:00 PM EST on the 8th. At 7 feet, Pomfret Road begins to flood.

A nearly stationary boundary set up near the Potomac River weak low pressure developed along the boundary. There was plenty of moisture in place from the Atlantic and Gulf of Mexico, and this combined with instability to produce very heavy rainfall rates in convection that developed. Convection was maximized around the boundary across central Maryland, and this led to several instances of flooding and flash flooding.

(MD-Z003) WASHINGTON, (MD-Z502) CENTRAL AND EASTERN ALLEGANY				
	07/09/19 04:12 EST	0		Dense Fog
	07/09/19 05:20 EST	0		

Clearing skies combined with light winds and lingering low level moisture to produce areas of dense fog in the early morning hours of July 9th.

(MD-Z017) ST. MARY'S				
	07/11/19 12:00 EST	0		Heat
	07/11/19 18:00 EST	0		

As surface high pressure moved offshore, southerly flow brought increasing warmth and humidity, combining to create heat index values in excess of 105 degrees in portions of southern Maryland.

A tree was blown down on Plum Point Road.				
A cold front approached from the west during the day of July 11th, with warm and moist air advection occurring on southerly flow. This promoted the development of significant amounts of instability, and that coupled with an approaching shortwave trough and modest shear values, led to the generation of scattered showers and thunderstorms, some of which became severe.

The water level at Upper Marlboro along the western Branch of the Patuxent was above flood state of 11 feet. The water level crested at 11.62 feet at 9:15 AM on July 12th. The Water Street Bridge was completely covered by water.

A cold front moved into the area on the 11th, and out ahead of the boundary there was a warm and very humid airmass. The warm and humid airmass caused an unstable atmosphere which led to the development of showers and thunderstorms. Storms produced heavy rainfall, and they were slow to move due to a weak flow aloft. This led to instances of flooding and flash flooding.

Multiple trees and power lines were reported down in the Aberdeen area.

On July 17th, the remnant circulation of Barry moved into Pennsylvania with a surface pressure trough out ahead of it over the Mid-Atlantic. Out ahead of the circulation, a hot, humid, and unstable air mass was in place, and this helped to initiate scattered to numerous showers and thunderstorms in the afternoon. Some of these thunderstorms became strong to locally severe.

A tree was blown down onto a house in the 6900 block of Anchorage Street off of MacArthur Boulevard.

Storm Data and Unusual Weather Phenomena - July 2019

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
MONTGOMERY COUNTY --- BROOKMONT [38.95, -77.12]				
	07/20/19 20:37 EST		0	Thunderstorm Wind (EG 50 kt)
	07/20/19 20:37 EST		0	Source: Fire Department/Rescue
Several trees were blown down in the 6900 block of MacArthur Boulevard with some lanes blocked.				
Isolated thunderstorms developed during the evening hours of July 20th as weak shortwave energy from a weakening mesoscale convective vortex acted in concert with local terrain circulations to initiate convection. These isolated thunderstorms became strong to locally severe.

A tree was blown down in the 1100 block of Main Street in Darlington.

An upper level ridge that was in place began to break down during the afternoon hours of July 21st as a cold front moved through the Midwest and an upper-level trough dug into the northern Plains. This allowed additional moisture into the area and when combined with a weakening capping inversion from height falls it was enough for scattered showers and thunderstorms to develop.

Storm Data and Unusual Weather Phenomena - July 2019

	07/22/19 19:43 EST		0	Source: Emergency Manager

A tree was blown down on a vehicle in the 500 block of Silver Spring Avenue near Nolte Avenue.

Falling heights, an increasing southwest flow aloft, an approaching cold front, and strengthening pressure trough overhead combined with instability from a hot and humid air mass in place to trigger showers and thunderstorms during the afternoon hours of July 22nd. With high levels of CAPE and increased shear profiles, thunderstorms became strong to severe as they organized into linear structures.

(MD-Z502) CENTRAL AND EASTERN ALLEGANY

	07/24/19 04:35 EST		0	Dense Fog
	07/24/19 06:35 EST		0	

Light winds combined with clearing skies and lingering low level moisture to produce areas of dense fog in the early morning hours of July 24th.

BALTIMORE COUNTY --- 0.5 E ROGERS FORGE [39.40, -76.59]

	07/29/19 17:40 EST		0	Thunderstorm Wind (EG 50 kt)
	07/29/19 17:40 EST		0	Source: Trained Spotter

A large tree was snapped in half blocking the 500 block of Joppa Road. Other large branches and small trees were also reported down in the area.

High pressure gradually shifted eastward and off the southeastern US coast through the day on July 29th. This promoted the development of southerly flow and the return of low level moisture. This allowed for the development of marginal instability and a few isolated showers and thunderstorms. One storm became severe.

ALLEGANY COUNTY --- 0.9 SE POTOMAC PARK [39.61, -78.81]

	07/30/19 12:52 EST		0	Thunderstorm Wind (EG 50 kt)

FAIRFAX COUNTY --- 0.5 W ARCTURUS [38.73, -77.06]

Storm Data and Unusual Weather Phenomena - July 2019

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
	07/02/19 19:22 EST		0	Thunderstorm Wind (EG 50 kt)
	07/02/19 19:22 EST		0	Source: State Official

A few trees were blown down in the 8600 block of Plymouth Road.

Increasing temperatures and low level moisture led to developing instability across the region during the day of July 2nd. The strongest mid-level forcing remained to the north across northern PA/OH where a stationary boundary lingered. However a weak upper level shortwave trough moving through did help showers and scattered thunderstorms to develop across portions of the state, and given the instability a few became severe.

ALBEMARLE COUNTY --- 1.5 NNW WARREN [37.79, -78.58]

07/04/19 14:45 EST	0	Thunderstorm Wind (EG 50 kt)
07/04/19 14:45 EST	0	Source: State Official

A tree was blown down at the intersection of James River Road and Porters Road.

Heat and plentiful low level moisture led to the development of instability and therefore scattered showers and thunderstorms during the afternoon of July 4th. While forcing was limited, one of the thunderstorms did briefly become pulse severe.

PAGE COUNTY --- 13.3 E PANORAMA [38.68, -78.07], 12.5 E PANORAMA [38.65, -78.09], 13.1 E PANORAMA [38.64, -78.08], 13.7 E PANORAMA [38.68, -78.07]

07/04/19 20:39 EST	0	Flood (due to Heavy Rain)
07/04/19 21:05 EST	0	Source: River/Stream Gage

The gauge along Battle Run at Laurel Mills showed minor flooding as it rose above flood stage of 11 feet. The water level crested at 11.16 feet at 8:45 PM Eastern Standard Time on July 4th. Red Hill Lane and Laurels Mill Road were flooded.

An isolated flooding incident occurred from heavy rain associated with showers and thunderstorms.

(VA-Z051) CULPEPER, (VA-Z055) STAFFORD, (VA-Z502) SOUTHERN FAUQUIER

07/05/19 01:15 EST	0	Dense Fog
07/05/19 03:15 EST	0	

With light winds overnight following rain from the afternoon and evening of July 4th, areas of dense fog developed across portions of central Virginia in the early morning hours of July 5th.

AUGUSTA COUNTY --- 0.5 W MT SOLON [38.35, -79.09]

07/05/19 16:34 EST	0	Thunderstorm Wind (EG 50 kt)
07/05/19 16:34 EST	0	Source: State Official

A tree was blown down along Natural Chimney Road.

An upper level trough crossed the region during the day of July 5th. Instability was relatively limited due to the prevalence of morning showers and cloud cover, however there was enough to generate showers and thunderstorms during the afternoon hours. One thunderstorm became severe with locally damaging winds.

SHENANDOAH COUNTY --- 0.9 WSW SEVEN FOUNTAINS [38.84, -78.42], 1.0 NNE DETRICK [38.84, -78.42], 1.0 N DETRICK [38.84, -78.42], 0.9 WSW SEVEN FOUNTAINS [38.85, -78.42]

Accotink Creek crested at 12.61 feet at 12:30 PM EST. Woodburn Road and Prosperity Avenue were flooded at Accotink Creek. Water reached the outbuilding near Braddock Road and it covered ballfields at Wakefield Park.				
A nearly stationary boundary set up near the Potomac River weak low pressure developed along the boundary. There was plenty of moisture in place from the Atlantic and Gulf of Mexico, and this combined with instability to produce very heavy rainfall rates in convection that developed. Convection was maximized around the boundary across northern Virginia near the Potomac River, and this led to several instances of flooding and flash flooding.

The water level at the New Alexandria stormwater pump station rapidly rose above flood stage of 5.5 feet, cresting at 5.7 feet at 5:13 PM EST on July 11th. Water spilled over near the pump house, flooding the adjacent parking lot.				
A cold front moved into the area on the 11th, and out ahead of the boundary there was a warm and very humid airmass. The warm and humid airmass caused an unstable atmosphere which led to the development of showers and thunderstorms. Storms produced heavy rainfall.

A tree was blown down on Ridge Lane near the intersection with US-29. Another tree was blown down blocking a portion of US-29 just north of Lovingston.				
HIGHLAND COUNTY --- 32.2 NNW MONTEBELLO [38.29, -79.41]				

Storm Data and Unusual Weather Phenomena - July 2019

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
	07/15/19 15:05 EST		0	Thunderstorm Wind (EG 50 kt)
	07/15/19 15:05 EST		0	Source: Broadcast Media

Two trees were blown down near the 17000 block of US-250 Highland Turnpike.

A frontal boundary stalled across southern and western Virginia during the day on July 15th. Near the frontal boundary a CAPE gradient set up over central and western Virginia. Upper level forcing was minimal to non-existent, but terrain circulations and the stalled boundary were enough for some scattered shower/thunderstorm development given the instability. A couple of these storms became severe.

(VA-Z055) STAFFORD, (VA-Z057) KING GEORGE

07/16/19 12:00 EST	0	Heat
07/16/19 18:00 EST	0

Multiple trees were blown down on VA-193 Georgetown Pike just west of Centrillion Avenue. A tree was also blown down on wires near the intersection of VA-193 Georgetown Pike and Swinks Mill Road.				
Isolated thunderstorms developed during the evening hours of July 20th as weak shortwave energy from a weakening mesoscale convective vortex acted in concert with local terrain circulations to initiate convection. These isolated thunderstorms became strong to locally severe.

A large tree was blown down blocking the right lane of VA-267 Dulles Toll Road just east of VA-7 Leesburg Pike.				
<p>An upper level ridge that was in place began to break down during the afternoon hours of July 21st as a cold front moved through the Midwest and an upper-level trough dug into the northern Plains. This allowed additional moisture into the area and when combined with a weakening capping inversion from height falls it was enough for scattered showers and thunderstorms to develop. With substantial instability, some of these thunderstorms became strong to locally severe.</p>

Storm Data and Unusual Weather Phenomena - July 2019

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
	07/29/19 17:50 EST		0	Thunderstorm Wind (EG 70 kt)
	07/29/19 17:50 EST		0	Source: Public

Dozens of trees were blown down, some snapped, near the intersection of VA-605 and Saddle Ridge Court. A few fences were damaged. One greenhouse was destroyed.

High pressure gradually shifted eastward and off the southeastern US coast through the day on July 29th. This promoted the development of southerly flow and the return of low level moisture. This allowed for the development of marginal instability and a few isolated showers and thunderstorms. One storm became severe.

ALBEMARLE COUNTY --- 1.4 N RIO [38.09, -78.47]

	07/30/19 13:26 EST		0	Thunderstorm Wind (EG 50 kt)
	07/30/19 13:26 EST		0	Source: Public

Multiple trees were blown down in northern Albemarle County between the City of Charlottesville and the Greene County line, including on US-29 Seminole Trail near Gander Drive, the 2600 block of Frays Mill Road, and at the intersection of Earlysville Road and Brighton Drive.

PAGE COUNTY --- 1.8 SE CAMP ROOSEVELT [38.71, -78.51]

A tree was blown down on US-340 in Bentonville.

WARREN COUNTY --- FRONT ROYAL [38.92, -78.18]

	07/30/19 15:50 EST		0	Thunderstorm Wind (EG 50 kt)
	07/30/19 15:50 EST		0	Source: State Official

Reports were received of trees and wires down in Front Royal, including along Westminster Drive.

ALBEMARLE COUNTY --- 0.9 SW EARLYSVILLE [38.16, -78.49]

	07/30/19 17:00 EST		0	Thunderstorm Wind (EG 50 kt)
	07/30/19 17:00 EST		0	Source: State Official

A large tree limb was blown down blocking the 100 block of Buck Mountain Road.

ALBEMARLE COUNTY --- 1.3 ESE (CHO)CHARLOTTESVILLE [38.14, -78.43]

	07/30/19 17:16 EST		0	Thunderstorm Wind (EG 50 kt)
	07/30/19 17:16 EST		0	Source: State Official

A tree was blown down on wires near the intersection of US-29 Seminole Trail and Dew Maw Lane. Another tree was blown down on US-29 Seminole Trail near Cypress Drive blocking northbound lanes.

A cold front and upper level trough approached the region during the afternoon and evening hours of July 30th. This led to scattered showers and thunderstorms to develop and given increasing CAPE and modest shear, a few of these became severe.

Storm Data and Unusual Weather Phenomena - July 2019

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
----------	-----------	-------------------	---------------------	------------------------

A surface front moved slowly through the Ohio Valley on the afternoon of July 31st, with a secondary surface trough positioned just east of the I-95 corridor. Aloft, an upper level trough slowly moved across the region. As instability increased during the afternoon hours, scattered showers and thunderstorms developed, and a few became severe.

WEST VIRGINIA, East

JEFFERSON COUNTY --- 0.9 SW CHARLES TOWN [39.29, -77.86], 1.0 SW CHARLES TOWN [39.29, -77.86], 1.3 SW CHARLES TOWN [39.29, -77.87], 1.4 SW CHARLES TOWN [39.28, -77.87], 1.1 SSW CHARLES TOWN [39.29, -77.86]

07/08/19 01:39 EST	0		Flood (due to Heavy Rain)

Police reported to the 911 Center that 8 to 10 inches of water was covering multiple roads.

JEFFERSON COUNTY --- 1.2 W KEARNEYSVILLE [39.38, -77.90], 2.7 WNW KEARNEYSVILLE [39.39, -77.93], 2.6 NW KEARNEYSVILLE [39.40, -77.92], 0.4 NE KEARNEYSVILLE [39.38, -77.88]

07/08/19 01:44 EST	0		Flood (due to Heavy Rain)
07/08/19 04:44 EST	0		Source: 911 Call Center

Police reported to the 911 Center that multiple roads had 8 to 10 inches of water covering them.

A nearly stationary boundary set up near the Potomac River weak low pressure developed along the boundary. There was plenty of moisture in place from the Atlantic and Gulf of Mexico, and this combined with instability to produce very heavy rainfall rates in convection that developed. Convection was maximized around the boundary across near the Potomac River, and this led to several instances of flooding.
