Wind gusts in excess of 30 knots were observed at Point Lookout.

A strong cold front passed through during the evening of the 31st. A southerly flow led to warm and humid conditions ahead of the boundary, which caused an unstable atmosphere. The instability along with the cold front caused showers and isolated thunderstorms, some of which were able to mix down strong winds from aloft.

Storm Data and Unusual Weather Phenomena - October 2019

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
<p>The tornado appeared to begin in a corn field on a property on the southwest side of Henkel Lane, where corn stalks were flattened in a narrow, meandering path, over an area about 25 yards wide. As this path meandered northeastward, it crossed a grove of healthy trees, most of which had substantial numbers of their large top branches snapped off. It then proceeded across an old barn which was destroyed. A 2 by 6 piece of lumber from the barn impaled the windshield of a nearby SUV, whose hood was also peeled back from the wind.</p> <p>Damage continued across a corn field on the northeast side of Henkel Lane. A small shed was destroyed on a property just south of VA-211 New Market Road. Here a small tree was uprooted, and several branches were downed across the roadway.</p> <p>In addition, several large trees were downed along Birdview Lane, all facing the same direction about a mile and a half to the southwest of the confirmed tornado path.</p>
