A wind gust of 55 knots (63 MPH) was measured by the Raccoon Point WeatherFlow sensor (XRAC).

A strong cold front produced a line of squalls and a brief period of storm-force winds over portions of the tidal Potomac River and the Chesapeake Bay.

### DISTRICT OF COLUMBIA

|                                       |                    |  |   |                 |

|   | 12/06/22 07:00 EST |  | 0 |                |

A weak low passed by to the west, causing southerly winds to overrun colder air near the surface. This resulted in freezing rain across the higher elevations in the Allegheny and Potomac Highlands where temperatures were just below freezing. Ice accumulation totaled up to around a trace to a few hundredths of an inch, but this led to icy roads that caused several accidents.

|   | 12/15/22 22:00 EST |  | 0 |           |

An area of low pressure passed by to the west with another area of low pressure developing near the Chesapeake Bay. This resulted in southeasterly winds to overrun colder air near the surface and a prolonged wintry mix/freezing rain event across the Allegheny and Potomac Highlands where temperatures were just below freezing. Ice accumulations totaled one quarter to three quarters of an inch. Sleet accumulations totaled upwards of 2" as well. This led to numerous accidents, downed trees and power lines which resulted in isolated power outages.

## Storm Data and Unusual Weather Phenomena - December 2022

| Location | Date/Time | Deaths & Injuries | Property & Crop Dmg | Event Type and Details |
|----------|-----------|-------------------|---------------------|------------------------|
|----------|-----------|-------------------|---------------------|------------------------|

A USGS stream gauge located along the Monocacy River near Bridgeport reached minor flood stage with crest of 13.41 feet. At thirteen feet, Baptist Road near Bridgeport begins to flood.

A coastal low pressure system interacted with a warm front resulting in a widespread two to three inches of rain with localized amounts up to four inches. This resulted in road closures due to high water and small streams overflowing their banks. River flooding also occurred.

| An area of low pressure passed by to the west with another area of low pressure developing near the Chesapeake Bay. This resulted in southeasterly winds to overrun colder air near the surface and a period of freezing rain. Sleet accumulations were less than one inch and ice accumulations totaled a trace to two tenths of an inch. This led to several accidents.   |                    |                      |                        |                                |

A weak low passed by to the west, causing southerly winds to overrun colder air near the surface. This resulted in freezing rain across the higher elevations in the Allegheny and Potomac Highlands where temperatures were just below freezing. Ice accumulation totaled up to around a trace to a few hundredths of an inch, but this led to icy roads that caused several accidents.

An area of low pressure passed by to the west with another area of low pressure developing near the Chesapeake Bay. This resulted in southeasterly winds to overrun colder air near the surface and a prolonged wintry mix/freezing rain event across the Allegheny and Potomac Highlands where temperatures were just below freezing. Ice accumulations totaled one quarter to three quarters of an inch. Sleet accumulations totaled upwards of 2" as well. This led to numerous accidents, downed trees and power lines which resulted in isolated power outages.

A wave of wintry precipitation developed over the region with temperatures at or just below freezing. This resulted in a period of snow, sleet, and freezing rain that eventually turned to rain during the late morning and afternoon. Snow/sleet accumulations totaled one to four inches and ice accumulations totaled a few hundredths to one tenth of an inch. This led to several accidents.

|  | 12/23/22 12:45 EST |  | 0 | Flood (due to Heavy Rain) |
|  | 12/23/22 15:31 EST |  | 0 | Source: River/Stream Gage |

A USGS stream gauge located along the Opequan Creek near Martinsburg reached minor flood stage with crest of 10.04 feet. At ten feet, floodwaters begin to cover Douglas Grove Road (County Road 9/16) east of Martinsburg. A portion of Bowers Road is also flooded. Low lying areas near the creek begin to flood. Water also begins to cover the stream access point at the Van Metre Ford Pedestrian Bridge.

A coastal low pressure system interacted with a warm front resulting in a widespread two to three inches of rain with localized amounts up to four inches. This resulted in road closures due to high water and small streams overflowing their banks. River flooding also occurred.
