

**WMO Headers for GFS-LAMP products
OSIP LAMP 05-059**

Note: This document has been updated (12/2013) to reflect the additional GRIB2 headers for GFS LAMP 2.5km LAMP convection and lightning gridded guidance and to update the information about the size of the ASCII data.

WMO headers have the format of T₁T₂A₁A₂ii CCCC

The CCCC for all GFS-LAMP products is **KWNO**.

A. WMO Headers for LAMP station guidance in ASCII text format

1. The T₁ designates the data type. For the GFS-LAMP ASCII text product T₁ is **F** for Forecast.
2. The T₂ further designates the data type. For the GFS-LAMP ASCII text product T₂ is **O** for Guidance.
3. The A₁A₂ designates the geographical area. For the GFS-LAMP ASCII text product the A₁A₂ is **US** for the United States of America.
4. The ii for the GFS-LAMP ASCII text product is **11** for global distribution. Data from stations in all regions of the United States of America will be contained in this ASCII text bulletin.
5. GFS-LAMP ASCII text product header = **FOUS11 KWNO**
6. The GFS-LAMP ASCII text product AWIPS identifier will be **LAVUSA**.

B. WMO Headers for LAMP station guidance in BUFR format

1. The T₁ designates the data type. For the GFS-LAMP BUFR product T₁ is **J** for Forecast Information - BUFR.
2. The T₂ further designates the data type. For the GFS-LAMP BUFR product T₂ is **S** for surface/sea level.
3. The A₁ further designates the data type. For the GFS-LAMP BUFR product the A₁ is **M** for Land based main synoptic reports.
4. The A₂ further designates the reference time. For the GFS-LAMP BUFR product the A₂ is **F** for 30 hours forecast.
5. The ii designates the geographical region of the data. For the GFS-LAMP BUFR product the ii is as follows:
 - i. **10** Pacific Region
 - ii. **11** Northeast Region
 - iii. **12** Southeast Region
 - iv. **13** North Central Region
 - v. **14** South Central Region
 - vi. **15** Rocky Mountains Region

- vii. **16** West Coast Region
- viii. **17** Alaska

6. GFS-LAMP BUFR product headers:

- i. **JSMF10 KWNO**
- ii. **JSMF11 KWNO**
- iii. **JSMF12 KWNO**
- iv. **JSMF13 KWNO**
- v. **JSMF14 KWNO**
- vi. **JSMF15 KWNO**
- vii. **JSMF16 KWNO**
- viii. **JSMF17 KWNO**

C. **WMO Headers for LAMP gridded guidance in GRIB2 format**

1. The T_1 for the GFS-LAMP GRIB2 product is **L**.
2. The T_2 designates the weather element type. The following values are used for the GFS-LAMP GRIB2 product:
 - i. **A** = 2-hr probability of lightning on a 5-km grid
 - ii. **B** = 2-hr categorical forecasts (yes/no) of lightning occurring on a 5-km grid
 - iii. **C** = 2-hr probability of lightning on a 2.5-km grid
 - iv. **D** = 2-hr categorical forecast potential (none/low/medium/high) of lightning occurring on a 2.5-km grid
 - v. **E** = 2-hr probability of convection on a 2.5-km grid
 - vi. **F** = 2-hr categorical forecast potential (none/low/medium/high) of convection occurring on a 2.5-km grid
3. The A_1 designates the geographical area. For the GFS-LAMP product in GRIB2 format, the A_1 is **U** for CONUS.
4. The A_2 and the ii follow the convention established in the NDFD. These three characters together represent the day and hour (UTC) for which the product is valid. Specifically for LAMP, the gridded guidance is for thunderstorms in a 2-hr period, and the valid time represents the end of the 2-h period. So a GFS-LAMP thunderstorm probability valid from 10-12 UTC would be said to be valid at 12 UTC.

The LAMP thunderstorm guidance in a 2-h period is valid for every 2-h period ending in the first 2-6 hours after issuance (3-7 hours after the cycle time), and every subsequent 2-hr period which ends on an even UTC hour. Please see http://www.nws.noaa.gov/mdl/gfslamp/docs/Tstorm_proj_schematic.pdf for a visual depiction of the valid periods.

- i. In general, the following convention for the A_2 and the ii is used for the GFS-LAMP gridded thunderstorm products:
 1. **A** = Day 0; ii = UTC hour (**21-23**)
 2. **B** = Day 1; ii = UTC hour (**00-23**)
 3. **C** = Day 2; ii = UTC hour (**00, 02, 04, 06, 08, 10, 12, 14, 16, 18**)
- ii. Specifically, these are the exact WMO headers for the LAMP GRIB2 thunderstorm products. All headers have CCCC of **KWNO**, and T_2 is as indicated above:

Table 1: WMO header information for LAMP products

Element	Header	Geographical Area	Data Type	No. of Products per cycle	Projections (hr)	Bytes per header/ cycle
All elements	JSMF10 KWNO	Pacific Region	BUFR	1	1-25 (in increments of 1 hour)	20K/20K
All elements	JSMF11 KWNO	Northeast CONUS	BUFR	1	1-25 (in increments of 1 hour)	400K/400K
All elements	JSMF12 KWNO	Southeast CONUS, PR, VI	BUFR	1	1-25 (in increments of 1 hour)	300K/300K
All elements	JSMF13 KWNO	North Central CONUS	BUFR	1	1-25 (in increments of 1 hour)	700K/700K
All elements	JSMF14 KWNO	South Central CONUS	BUFR	1	1-25 (in increments of 1 hour)	400K/400K
All elements	JSMF15 KWNO	Rocky Mountains CONUS	BUFR	1	1-25 (in increments of 1 hour)	275K/275K
All elements	JSMF16 KWNO	West Coast CONUS	BUFR	1	1-25 (in increments of 1 hour)	275K/275K
All elements	JSMF17 KWNO	Alaksa	BUFR	1	1-25 (in increments of 1 hour)	200K/200K
All elements	FOUS11 KWNO	CONUS, HI, AK, PR, VI	ASCII	1	1-25 (in increments of 1 hour)	3.2M/3.2M
5-km Gridded Lightning Probabilities in a 2-hr period	LAUA2ii KWNO	CONUS	GRIB2	14 grids (1 per projection)	2-hr periods ending at the following projections - From even cycles: 3, 4, 5, 6, 7, 8, 10, 12, 14, 16, 18, 20, 22, 24 - From odd cycles: 3, 4, 5, 6, 7, 9, 11, 13, 15, 17, 19, 21, 23, 25	75K/1.05M
5-km Gridded Categorical Forecasts (yes/no) of Lightning occurring in a 2-hr period	LBUA2ii KWNO	CONUS	GRIB2	14 grids (1 per projection)	2-hr periods ending at the following projections - From even cycles: 3, 4, 5, 6, 7, 8, 10, 12, 14, 16, 18, 20, 22, 24 - From odd cycles: 3, 4, 5, 6, 7, 9, 11, 13, 15, 17, 19, 21, 23, 25	65K/910K

2.5-km Gridded Lightning Probabilities in a 2-hr period	LCUA2ii KWNO	CONUS	GRIB2	14 grids (1 per projection)	2-hr periods ending at the following projections - From even cycles: 3, 4, 5, 6, 7, 8, 10, 12, 14, 16, 18, 20, 22, 24 - From odd cycles: 3, 4, 5, 6, 7, 9, 11, 13, 15, 17, 19, 21, 23, 25	571K/8M
2.5-km Gridded Categorical Forecast Potential (non/low/medium/high) of Lightning occurring in a 2-hr period	LDUA2ii KWNO	CONUS	GRIB2	14 grids (1 per projection)	2-hr periods ending at the following projections - From even cycles: 3, 4, 5, 6, 7, 8, 10, 12, 14, 16, 18, 20, 22, 24 - From odd cycles: 3, 4, 5, 6, 7, 9, 11, 13, 15, 17, 19, 21, 23, 25	428K/6M
2.5-km Gridded Convection Probabilities in a 2-hr period	LEUA2ii KWNO	CONUS	GRIB2	14 grids (1 per projection)	2-hr periods ending at the following projections - From even cycles: 3, 4, 5, 6, 7, 8, 10, 12, 14, 16, 18, 20, 22, 24 - From odd cycles: 3, 4, 5, 6, 7, 9, 11, 13, 15, 17, 19, 21, 23, 25	571K/8M
2.5-km Gridded Categorical Forecast Potential (non/low/medium/high) of Convection occurring in a 2-hr period	LFUA2ii KWNO	CONUS	GRIB2	14 grids (1 per projection)	2-hr periods ending at the following projections - From even cycles: 3, 4, 5, 6, 7, 8, 10, 12, 14, 16, 18, 20, 22, 24 - From odd cycles: 3, 4, 5, 6, 7, 9, 11, 13, 15, 17, 19, 21, 23, 25	428K/6M
