Subject: Termination of Legacy BUFR and GRIB 1 MOS Products on or about  
December 17, 2019

The Meteorological Development Laboratory (MDL) will terminate various legacy Binary Universal Form for the Representation of meteorological data (BUFR) and gridded binary (GRIB) 1 products on or about Tuesday, December 17, 2019, with the 1200 Coordinated Universal Time (UTC) model cycle time.

The BUFR data to be discontinued include Model Output Statistics (MOS) medium range (MEX) products based on the Global Forecast System (GFS) model that are currently disseminated at 00Z and have been replaced by a newer version. Legacy BUFR data currently reside in:

<ftp://tgftp.nws.noaa.gov/SL.us008001/DF.bf/DC.mos/DS.mexjs/>

The newer version will continue to be available at this location and will be disseminated twice daily at 0000 Coordinated Universal Time (UTC) and 1200 UTC.

The GRIB 1 files that will be discontinued are older Cressman analyses of thunderstorm, severe thunderstorm and other elements appearing in the MOS text guidance over the contiguous U.S. (CONUS) and Alaska. These files include both short-range (MAV) and medium-range (MEX) products based on the GFS model and short-range (MET) products based upon the North American Mesoscale (NAM) model. Users are encouraged to refer to similar products from the National Blend of Models (NBM). GRIB 1 files are located at:

<ftp://tgftp.nws.noaa.gov/SL.us008001/DF.gr1/DC.mos/>

For questions concerning this legacy data removal, please contact:

Jeffrey Craven  
MDL/Silver Spring, MD
