## TSUNAMI EDUCATION AND TRAINING

Saving lives during tsunamis requires a complex system of trained professionals, observational networks, data processing and communication systems, standardized products, local response protocols, and an educated public. The COMET Program has developed materials to help all those with a role in the public tsunami warning system become better communicators and consumers of tsunami information. All modules are available at no cost to registered users at [www.meted.ucar.edu/training\\_course.php?id=38](http://www.meted.ucar.edu/training_course.php?id=38). Registration is easy.
